

SONY

Repeat performance.

Sony Audio Cassette Duplicators.

If you have high standards in audio production, we'll match them with our own high standards of audio reproduction.

Sony's CCP Series of Audio Cassette Duplicators feature world class design and advanced technology, resulting in high quality tape duplication at 16 times normal speed.

Start with a master unit, in stereo or mono, to make 3 tapes at a time. Daisy chain up to ten expansion units which accommodate 4 tapes each, and you can make up to 43 copies at a time. Precise controls and LED meters provide accurate duplication, letting you tailor the sound level as needed.

Microprocessor control provides gentler tape handling protecting your productions. Direct drive motors help control the tape movement across the heads, allowing for fast rewind speed. For production line applications, models are available that feature Sony ferrite heads for added durability and dependability. For exceptional performance in a compact package at a competitive price, rely on Sony Audio Cassette Duplicators. When it comes to quality, we're constantly repeating ourselves. For the name of your nearest Sony dealer, call 1-800-472-7669 ext. CCPAD or visit our website at <http://www.sony.com/professional>.

No one can duplicate us™
