Highlighted Features

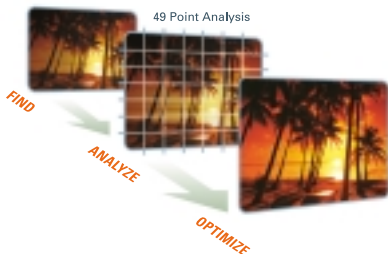

3X Optical / 6X Precision Digital Zoom Zoom helps you frame your shots for better digital pictures. Bring distant subjects closer or pull back for wide shots. Precision Digital zoom extends the optical zoom range by 2X without the jagged edges of other designs, resulting in smooth images.

3 Area Multi-Point Autofocus

3 Area Multi-Point Autofocus By evaluating 3 separate focus areas of the frame, Sony's Multi-point AF system can intelligently focus on the subject and avoid mistakenly focusing on the background.

Multi-Pattern Measuring Independently light-metering 49 points of the frame, Multi-Pattern measuring establishes the optimum exposure value, even in scenes where pronounced highlight and shadow are not centered in the frame.

Preferred Power You won't be caught short. Not only does Sony supply batteries with every 2002 Digital Still Camera, but they also include a charger. In most cases the charger can be used as an AC power supply too. Now that's convenience.

Autofocus Illuminator Briefly illuminating the subject in low- or no-light conditions, AF Illuminator helps establish a positive focus lock.

Pre-Flash Metering With a momentary pre-flash, the camera illuminates the subject and calculates exposure through the lens directly from the CCD for accurate flash metering. Adjustable flash level and red-eye reduction insure great flash shots.

Feature Icons

Carl Zeiss® Vario Sonnar Lens Famous for its superior sharpness and color accuracy, the Vario Sonnar lens has low chromatic aberration.

1/1.8" 3.2 MegaPixel Effective Super HAD™ CCD, 3.3 MP Gross
High resolution Super HAD CCDs provide excellent image quality by allowing more light to pass to each pixel.

Optical and Digital Zoom helps you frame your shots for better digital pictures.

3 Area Multi-Point Auto Focus Evaluating separate areas of the frame, Multi-point AF intelligently focuses on the subject, not the background.

AF (Auto Focus) Illuminator Briefly lighting the scene in low- or no-light conditions, AF Illuminator insures a positive focus lock.

Hologram AF Low Light Laser Focusing Assist Hologram AF reads the contrast from a laser pattern and the subject for accurate focus in low light conditions.

NightFraming With Infra-red assist, NightFraming helps compose your shots under low light conditions.

Multi-Pattern Measuring Establishes the optimum exposure value, even in scenes where highlight and shadow are not centered in the frame.

Scene Selection Mode Match camera exposure parameters to the shooting situation with easily selectable Scene Modes.

Manual Exposure Controls Aperture Priority, Shutter Priority or Manual exposure control provide a full range of creativity.

Slow Shutter Noise Reduction Captures the scene and then subtracts a "dark frame" to minimize CCD noise during long exposures.

Multi Burst Mode Captures 16 320x240 frames in a single 1280x960 image for convenient motion analysis.

MPEG Movie Mode (No Audio) Captures video (w/audio in some models) in selectable frame size in the convenient MPEG1 format.

CD-RW Media CD Mavica® cameras shoot directly to 156MB CD-R/RW discs, so there's room for hundreds of images and movie clips for instant archiving.

Memory Stick® Media* Digital. Powerful. Transportable. Memory Stick media is compact, portable and rugged connecting a variety of hardware and software applications.
