WARNING

To reduce fire or shock hazard, do not expose the unit to rain or moisture.

This symbol is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.
IMPORTANT SAFEGUARDS

For your protection, please read these safety instructions completely before operating the appliance, and keep this manual for future reference. Carefully observe all warnings, precautions and instructions on the appliance, or the one described in the operating instructions and adhere to them.

Power Sources

This set should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of electrical power supplied to your home, consult your dealer or local power company. For those sets designed to operate from battery power, or other sources, refer to the operating instructions.

Polarization

This set may be equipped with a polarized ac power cord plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to have a suitable outlet installed. Do not defeat the safety purpose of the polarized plug by forcing it in.

Overloading

Do not overload wall outlets, extension cords or convenience receptacles beyond their capacity, since this can result in fire or electric shock.

Object and Liquid Entry

Never push objects of any kind into the set through openings as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the set.

Attachments

Do not use attachments not recommended by the manufacturer, as they may cause hazards.

Cleaning

Unplug the set from the wall outlet before cleaning or polishing it. Do not use liquid cleaners or aerosol cleaners. Use a cloth lightly dampened with water for cleaning the exterior of the set.

Installation

Water and Moisture

Do not use power-line operated sets near water – for example, near a bathtub, washbowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool, etc.

Power-Cord Protection

Route the power cord so that it is not likely to be walked on or pinched by items placed upon or against them, paying particular attention to the plugs, receptacles, and the point where the cord exits from the appliance.

Accessories

Do not place the set on an unstable cart, stand, tripod, bracket, or table. The set may fall, causing serious injury to a child or an adult, and serious damage to the set. Use only a cart, stand, tripod, bracket, or table recommended by the manufacturer.

Ventilation

The slots and openings in the cabinet are provided for necessary ventilation. To ensure reliable operation of the set, and to protect it from overheating, these slots and openings must never be blocked or covered.
– Never cover the slots and openings with a cloth or other materials.
– Never block the slots and openings by placing the set on a bed, sofa, rug, or other similar surface.
– Never place the set in a confined space, such as a bookcase, or built-in cabinet, unless proper ventilation is provided.
– Do not place the set near or over a radiator or heat register, or where it is exposed to direct sunlight.

Continued ➔
Lightning

For added protection for this set during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the set due to lightning and power-line surges.

Safety Check

Upon completion of any service or repairs to the set, ask the service technician to perform routine safety checks (as specified by the manufacturer) to determine that the set is in safe operating condition.

Service

Damage Requiring Service

Unplug the set from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- When the power cord or plug is damaged or frayed.
- If liquid has been spilled or objects have fallen into the set.
- If the set has been exposed to rain or water.
- If the set has been subject to excessive shock by being dropped, or the cabinet has been damaged.
- If the set does not operate normally when following the operating instructions. Adjust only those controls that are specified in the operating instructions. Improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the set to normal operation.
- When the set exhibits a distinct change in performance – this indicates a need for service.

Servicing

Do not attempt to service the set yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

Replacement parts

When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer that have the same characteristics as the original parts. Unauthorized substitutions may result in fire, electric shock, or other hazards.
Read this first

Before operating the unit, please read this manual thoroughly, and retain it for future reference.

CAUTION

Replace the battery with the specified type only. Otherwise, fire or injury may result.

For customers in the U.S.A. and CANADA

RECYCLING LITHIUM-ION BATTERIES

Lithium-Ion batteries are recyclable. You can help preserve our environment by returning your used rechargeable batteries to the collection and recycling location nearest you.

For more information regarding recycling of rechargeable batteries, call toll free 1-800-822-8837, or visit http://www.rbrc.org/

Caution: Do not handle damaged or leaking Lithium-Ion batteries.

Owner’s Record

The model and serial numbers are located on the bottom. Record the serial number in the space provided below. Refer to these numbers whenever you call upon your Sony dealer regarding this product.

Model No. HDR-FX7
Serial No.
Model No. AC-
No.

For customers in the U.S.A.

If you have any questions about this product, you may call:
Sony Customer Information Center 1-800-222-SONY (7669).
The number below is for the FCC related matters only.

Regulatory Information

Declaration of Conformity

Trade Name: SONY
Model No.: HDR-FX7
Responsible Party: Sony Electronics Inc.
Address: 16530 Via Esprillo, San Diego, CA 92127 U.S.A.
Telephone Number: 858-942-2230
This device complies with Part 15 of the FCC Rules.
Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

Note

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.
These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.
However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on,
the user is encouraged to try to correct the interference by one or more of the following measures:
– Reorient or relocate the receiving antenna.
– Increase the separation between the equipment and receiver.
– Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
– Consult the dealer or an experienced radio/TV technician for help.
The supplied interface cable must be used with the equipment in order to comply with the limits for a digital device pursuant to Subpart B of Part 15 of FCC Rules.

Notes on use

Types of cassette you can use in your camcorder
You can use mini DV cassettes marked with MiniDV. Mini DV cassettes with Cassette Memory are incompatible (p. 105).

Types of “Memory Stick” you can use in your camcorder
There are two sizes of “Memory Stick.”
You can use “Memory Stick Duo” marked with MEMORY STICK DUO or MEMORY STICK PRO DUO (p. 106).

“Memory Stick Duo”
(This size can be used with your camcorder.)

“Memory Stick”
(You cannot use it in your camcorder.)

Note
• You cannot use any type of memory card except “Memory Stick Duo.”

• “Memory Stick PRO” and “Memory Stick PRO Duo” can be used only with “Memory Stick PRO” compatible equipment.
• Do not attach a label or the like on a “Memory Stick Duo” or a Memory Stick Duo Adaptor.

When using a “Memory Stick Duo” with “Memory Stick” compatible equipment
Be sure to insert the “Memory Stick Duo” into the Memory Stick Duo Adaptor.

Memory Stick Duo Adaptor

Using the camcorder
• Do not hold the camcorder by the following part.

Notes on use (Continued)
Note

- The camcorder is not dustproof, dripproof or waterproof. See “Maintenance and precautions” (p. 111).
- Before connecting your camcorder to another device with an HDMI cable, component video cable, USB or i.LINK cable, be sure to insert the connector plug the correct way, and not forcibly to avoid damaging the terminal, or cause a malfunction of your camcorder.

About menu items, LCD panel, viewfinder, and lens

- A menu item that is grayed out is not available under the current recording or playback conditions.
- The LCD screen and the viewfinder are manufactured using extremely high-precision technology, so over 99.99% of the pixels are operational for effective use. However, there may be some tiny black points and/or bright points (white, red, blue, or green in color) that appear constantly on the LCD screen and the viewfinder. These points are normal results of the manufacturing process and do not affect the recording in any way.
- Exposing the LCD screen, the viewfinder, or the lens to direct sunlight for long periods of time may cause malfunctions.

- Do not aim at the sun. Doing so might cause your camcorder to malfunction. Take pictures of the sun only in low light conditions, such as at dusk.

On recording

- Before starting to record, test the recording function to make sure the picture and sound are recorded without any problems.
- Compensation for the contents of recordings cannot be provided, even if recording or playback is not possible due to a malfunction of the camcorder, storage media, etc.
- TV color systems differ depending on the countries/regions. To view your recordings on a TV, you need an NTSC system-based TV.
- Television programs, films, video tapes, and other materials may be copyrighted. Unauthorized recording of such materials may be contrary to the copyright laws.

On playing back HDV tapes on other devices

You cannot play back a tape recorded in the HDV format on DV format video cameras or on mini DV players. Check the contents of tapes by playing them back on this camcorder prior to playing them back on other devices.

Note on the icons used in this manual

- Features available for the HDV format only
- Features available for the DV format only
- This function that can be used when i.LINK cable is connected.
- This function that can be used when USB cable is connected.
About this manual

- The images of the LCD screen and the viewfinder used in this manual for illustration purposes are captured using a digital still camera, and therefore may appear different.
- The on-screen displays in each local language are used for illustrating the operating procedures. Change the screen language before using your camcorder if necessary (p. 74).
- Design and specifications of recording media and other accessories are subject to change without notice.

About the Carl Zeiss lens

Your camcorder is equipped with a Carl Zeiss lens, which was developed jointly by Carl Zeiss, in Germany, and Sony Corporation, and produces superior images. It adopts the MTF measurement system for video cameras and offers a quality typical of a Carl Zeiss lens. Also, the lens for your camcorder is T*-coated to suppress unwanted reflections and faithfully reproduce colors.

MTF= Modulation Transfer Function. The number value indicates the amount of light from a subject coming into the lens.

Trying out the new HDV format!

High image quality

The HDV format has about 2 times the horizontal resolution of a standard TV resulting in about 4 times the amount of pixels providing high quality images. Being HDV format compliant, your camcorder is ready to shoot crystal clear, high-definition images.

What is the HDV format?

The HDV format is a new video format for shooting and playing back high definition images on popular DV standard cassette tapes.

- Your camcorder adopts the HDV1080i specification, which utilizes 1,080 effective scanning lines, within the HDV standards, and records pictures at the image bit rate of about 25 Mbps.

- These operating instructions refer to the HDV1080i specification as HDV format unless there is a need to specify.

Why shoot in the HDV format?

By moving to digital video, like the rest of the world, you will be able to capture important moments in your life in high quality digital HDV format, allowing you to relive them. Your camcorder’s down convert function converts pictures in HDV format to SD (standard definition) quality for viewing on older wide TV formats, and on 4:3 aspect ratio TVs when a high definition TV set is not available. This provides an easy path to HDV format video.

- The down convert function converts HDV format video to DV for playback or editing when your camcorder is connected to a TV or VCR that is not HDV1080i compliant. The resulting image is displayed in SD (standard definition).

**Features of this camcorder**

The HDV1080i specification digital HD video camera recorder has the following features to enable you to record beautiful scenery while traveling, etc., in high definition quality.

1. **3-ClearVid CMOS sensor system installed**
   
   This camcorder is fitted with the 3-ClearVid CMOS sensor system. Superb spectroscopic characteristics and high definition are achieved by the use of three ClearVid CMOS sensors developed by Sony for high definition, enabling reproduction of digital high definition with excellent sensitivity and color reproducibility.

2. **Carl Zeiss Vario-Sonnar T* 20X optical zoom lens installed**
   
   The Carl Zeiss Vario-Sonnar T* 20× optical zoom lens lets you zoom in on distant objects and record in high definition quality.

3. **Realistic sound recording with built-in high performance microphone**
   
   The high performance stereo microphone built into this camcorder enables highly realistic sound recording.

4. **Detailed manual settings for serious filming**
   
   Extensive manual setting functions allow you to shoot high definition videos with customized settings.
   - The zoom ring, focus ring and EXPOSURE/IRIS dial provide full manual control.
   - You can manually fine-adjust the shutter speed, white balance and gain.

5. **Connecting to other devices**
   
   Superb external connectability is provided by a “Memory Stick Duo” slot, USB port, HDMI OUT jack, and headphone jack on the left side of your camcorder and an i.LINK (HDV/DV) jack, COMPONENT OUT jack, A/V OUT jack, and DC IN jack on the right side.

Viewing video recorded in the HDV format!

Viewing on a high definition TV (p. 51)

Pictures recorded in the HDV format can be played back as crisp HD (high definition) picture on a high definition TV.

- For details on HDV1080i specification compliant TVs, see page 53.

Viewing on a 16:9 TV/4:3 TV (p. 51)

Your camcorder can down convert video recorded in the HDV format to SD (standard definition) quality for playback on a conventional TV.

Dubbing to other video equipment (p. 76)

- Connecting to an HDV1080i specification
  An optional i.LINK cable allows you to copy pictures in HD (high definition) quality.

- Connecting to HDV1080i non-compliant specification
  Use your camcorder to convert HDV format video to SD (standard definition) quality to enable copying.

Connecting to a computer (p. 86)

- Copying “Memory Stick Duo” still images to a computer.

- Copying movie from tape to a computer
  You can copy movie to a computer, and save to DVD from copying movie. The computer will need to be set up differently depending on whether HDV or DV format video is to be copied. See page 89 for details.
Getting Started

Step 1: Checking supplied items

Make sure that you have following items supplied with your camcorder. The number in the parentheses indicates the number of that item supplied.

• The cassette tape and “Memory Stick Duo” are not included. See page 26, 105 and 106 for compatible cassettes and “Memory Stick Duo” for your camcorder.

AC Adaptor (1) (p. 18)

Power cord (1) (p. 18)

Wireless Remote Commander (1) (p. 123)

A button-type lithium battery is already installed.

A/V connecting cable (1) (p. 51, 76)

Component video cable (1) (p. 51)

USB cable (1) (p. 86)

Large eyecup (1) (p. 23)

Rechargeable battery pack NP-F570 (1) (p. 18, 108)

Lens hood with lens cover (1) (p. 17)

Operating Guide (This manual) (1)
Step 2: Attaching the lens hood with lens cover

Align the marks on the lens hood to those on the camcorder, and turn the lens hood in the direction of the arrow. Tighten the lens hood fixing screw.

To remove the Lens hood with lens cover

Loosen the lens hood fixing screw and turn the lens hood in the opposite direction of the arrow in the illustration above.

💡 Tip

- If you attach, remove or adjust an 62mm (2 1/2 in.) PL filter or MC protector, remove the lens hood.

To open the shutter of the Lens hood with lens cover

Move the lens cover lever up and down to open or close the lens cover.

Move the lens cover lever to OPEN to open the lens cover, and move the lever to CLOSE to close the lens cover.
Step 3: Charging the battery pack

You can charge the battery by attaching the “InfoLITHIUM” battery pack (L series) to your camcorder.

Note
- You cannot use batteries other than the “InfoLITHIUM” battery pack (L series) (p. 108).

1 Press the battery pack and slide it down.

2 With the ▶ mark on the DC plug facing the cassette compartment, connect the AC Adaptor to the DC IN jack on your camcorder.

3 Connect the power cord to the AC Adaptor.

4 Connect the power cord to the wall outlet.

5 Set the POWER switch to OFF (CHG).
   The CHARGE lamp lights up and charging starts.
After charging the battery

The CHARGE lamp turns off when the battery is fully charged. Disconnect the AC Adaptor from the DC IN jack.

Tip
- You can check the remaining battery with Battery info (p. 48).

To remove the battery pack

Slide the POWER switch to OFF (CHG). Push the BATT RELEASE (battery release) button and remove the battery pack.

Recording time

Approximate time (min.) available when you use a fully charged battery pack.

On the battery pack
- Before changing the battery pack, slide the POWER switch to OFF (CHG).
- The CHARGE lamp flashes during charging, or Battery Info (p. 48) will not be correctly displayed under the following conditions.
  - The battery pack is not attached correctly.
  - The battery pack is damaged.
  - The battery pack is worn-out (For Battery Info only).
- The power will not be supplied from the battery as long as the AC Adaptor is connected to the DC IN jack of your camcorder, even when the power cord is disconnected from the wall outlet.
- When attaching an optional video light, it is recommended that you use a NP-F970 battery pack.

On the charging/recording/playback time
- Times measured with the camcorder at 25 °C (77 °F) (10 to 30 °C (50 °F to 86 °F)) is recommended.
- The recording and playback time will be shorter when you use your camcorder in low temperatures.

- The recording and playback time will be shorter depending on the conditions under which you use your camcorder.

Using an outside power source
You can use the AC Adaptor to obtain AC. While you are using the AC Adaptor, the battery pack will not lose its charge even when it is attached to your camcorder.

Connect your camcorder as shown in Step3: Charging the battery pack (p. 18).

On the AC Adaptor
- Use the nearby wall outlet when using the AC Adaptor. Disconnect the AC Adaptor from the wall outlet immediately if any malfunction occurs while using your camcorder.
- Do not use the AC Adaptor placed in a narrow space, such as between a wall and furniture.
- Do not short-circuit the DC plug of the AC Adaptor or battery terminal with any metallic objects. This may cause a malfunction.

PRECAUTION
- Even if your camcorder is turned off, AC power (house current) is still supplied to it while connected to the wall outlet via the AC Adaptor.
Step 4: Turning the power on and holding your camcorder properly

To record or play back, slide the POWER switch to the respective direction. When using it for the first time, [CLOCK SET] screen appears (p. 24).

1 While pressing the green button, set the POWER switch.

CAMERA: To record pictures.
VCR: To play or edit pictures.

Note
- After you have set the date and time ([CLOCK SET], p. 24), the next time you turn on the power of your camcorder, the current date and time will be displayed on the LCD screen for a few seconds.

2 Hold the camcorder properly.

3 Ensure a good grip, then fasten the grip belt.

To turn off the power
Slide the POWER switch to OFF (CHG).

Note
- If warning messages appear on the screen, follow the instructions (p. 102).
Step 5: Adjusting the LCD panel and viewfinder

The LCD panel

Open the LCD panel while pressing the OPEN button 90 degrees to the camcorder (①), then rotate it to the best angle to record or play (②).

- If you rotate the LCD panel 180 degrees toward the lens from the position ①, you can close the LCD panel with the LCD screen facing outward. This is convenient during playback operations.
- To close the LCD panel with the LCD screen inward, rotate the LCD panel to the position ①, and then close the LCD panel.

To turn off the LCD backlight to make the battery last longer

Press and hold the DISPLAY/BATT INFO button for a few seconds until \( \text{off} \) appears. This setting is practical when you use your camcorder in bright conditions or where you want to save battery power. The recorded picture will not be affected by the setting. To turn on the LCD backlight, press and hold the DISPLAY/BATT INFO button for a few seconds until \( \text{off} \) disappears.

Tips
- See [LCD BRIGHT] (p. 67) to adjust the brightness of the LCD screen.

The viewfinder

You can view pictures using the viewfinder to save the battery, or when the picture on the LCD screen is not clear.

- You can adjust the brightness of the viewfinder backlight from [VF B.LIGHT] (p. 67).

Viewfinder lens adjustment lever
Move it until the picture becomes clear.
When the picture in the viewfinder is hard to see

If you cannot see the picture in the viewfinder clearly under bright circumstances, use the supplied large eyecup. To attach the large eyecup, stretch it slightly and align it with the eyecup groove in the viewfinder. You can attach the large eyecup facing either the right or left side.

**Note**

- Do not remove the pre-attached eyecup.

Attach with the protruding part at the top.
Step 6: Setting the date and time

Set the date and time when using this camcorder for the first time. If you do not set the date and time, [CLOCK SET] screen appears every time you turn on your camcorder or change the POWER switch position.

Tip
- If you do not use your camcorder for about 3 months, the built-in rechargeable battery gets discharged and the date and time settings may be cleared from the memory. In that case, charge the rechargeable battery and then set the date and time again (p. 113).

Skip to step 4 when you set the clock for the first time.

1 Press the MENU button.

2 Select (OTHERS) by turning the SEL/PUSH EXEC dial, then press the dial.

3 Select [CLOCK SET] by turning the SEL/PUSH EXEC dial, then press the dial.

4 Set [Y] (year) by turning the SEL/PUSH EXEC dial, then press the dial.

You can set any year up to the year 2079.

5 Set [M] (month), [D] (day), hour and minute, then press the dial.

The clock starts.
For midnight, set it to 12:00 AM.
For midday, set it to 12:00 PM.
Tip

- The date and time do not appear during recording, but they are automatically recorded on the tape, and can be displayed during playback ([DATA CODE] (p. 67)).

Changing the language setting

You can change the on-screen displays to show messages in a specified language. Select the screen language in [LANGUAGE] (p. 74).
Step 7: Inserting a tape or a “Memory Stick Duo”

Cassette tape

You can use mini DV cassettes only (p. 105).

1 Slide and hold the OPEN/EJECT lever in the direction of the arrow and open the lid.

The cassette compartment automatically comes out and opens up.

2 Insert a cassette with its window facing outwards, then press PUSH.

Push the center of the back of the cassette lightly.

The cassette compartment automatically slides back in.

Note

- Do not push the portion marked DO NOT PUSH while it is sliding in. It may cause a malfunction.

3 Close the lid.

Tip

- The recordable time varies depending on [DV REC MODE] (p. 69).

To eject the cassette

Open the lid following the same procedure as described in step 1 and remove the cassette.

“Memory Stick Duo”

You can use only a “Memory Stick Duo” marked with MEMORY STICK DUO or MEMORY STICK PRO Duo (p. 106).

1 Open the jack cover.

Jack cover
2 Insert the “Memory Stick Duo” into the “Memory Stick Duo” slot in the right direction until it clicks.

Note
- If you insert the “Memory Stick Duo” into the slot in the wrong direction, the “Memory Stick Duo,” the “Memory Stick Duo” slot, or image data may be damaged.

To eject a “Memory Stick Duo”
Lightly push the “Memory Stick Duo” once.

Notes
- When the access lamp is lit or flashing, your camcorder is reading/writing data. Do not shake or knock your camcorder, turn the power off, eject the “Memory Stick Duo,” or remove the battery pack. Otherwise, image data may be damaged.
- When inserting or ejecting the “Memory Stick Duo,” be careful with the “Memory Stick Duo” from popping out and dropping.
This camcorder records movies on tape and still images on “Memory Stick Duo”. The procedure for recording movies is below.

- This camcorder can record movies in either HDV or DV format. The factory setting is HDV format ([REC FORMAT] p. 69).

1. Open the shutter of the lens hood.

2. While pressing the green button, set the POWER switch to CAMERA.

   If the POWER switch is set to OFF (CHG), slide it while pressing the green button.
3 Press the REC START/STOP button \( A \) (or \( B \)).

![Rec Lamp Diagram]

The Rec lamp lights up during recording.
To stop the movie recording, press the REC START/STOP button again.

⚠️ **Tips**
- When recording in HDV format, the aspect ratio is fixed to 16:9. When recording in DV format, you can switch the aspect ratio to 4:3 ([DV WIDE REC] p. 70).
- You can change the screen display during recording (p. 47).
- Indicators displayed on the screen during recording are shown on page 124.
- The recording lamp can be set to stay off ([REC LAMP] p. 75).
- You cannot record the movie on a “Memory Stick Duo”.

### To record in mirror mode

Open the LCD panel 90 degrees to the camcorder (①), then rotate it 180 degrees toward the lens (②).

ー **Tip**
- A mirror-image of the subject appears on the LCD screen, but the recorded picture will be normal.
To record still images

Press the PHOTO/EXPANDED FOCUS button. The image is recorded on a “Memory Stick Duo.” Recording is complete when dis appears. You can also record still images during movie recording.

Tips

- When you are not recording a movie, you will hear the shutter click.
- The still image size is as follows:
  - When recording in HDV or DV (16:9) format: 1.2M (1,440 × 810 dots)
  - When recording in DV (4:3) format: 0.9M (1,080 × 810 dots)
- You can change the image quality and number of recordable images ([QUALITY] (p. 71)).
- Indicators displayed on the screen during shooting are shown on page 124.
- You can set the PHOTO/EXPANDED FOCUS button to start the expanded focus function as you press the button ([PHOTO/EXP.FOCUS] (p. 74)).
You can play back movies as follows.

1 While pressing the green button, set the POWER switch to VCR.

2 Start playing back.

Press ◄ (rewind) to go to the point you want to view, then press ► (play) to start playback.

• ■ : Stop
• ■ : Pause (Press ► or ■ again to restart the playback)
• ► ◄ : Forward/Rewind
• ■ : Slow

Notes

• Playback automatically stops if pause is engaged for more than 3 minutes.
• When playing back a tape recorded in the HDV and DV formats, and the signal switches between HDV and DV, the picture and sound disappear temporarily.
• You cannot play back the tape recorded in the HDV format on video cameras of the DV format or mini-DV players.

Tips

• Indicators displayed on the screen during playback are shown on page 125.
• You can change the screen display during playback (p. 47).
• To play back the tape recorded using an external monaural microphone connected, see [MULTI-SOUND] (p. 64).
To search for a scene while viewing a movie

Press ➪/ ◄ during playback (Picture Search). To view during fast forward press and hold ➪ and to view during rewind press and hold ◄ (Skip Scan).

Note

- Reverse picture search/skip scan is not possible with tapes recorded in HDV format.

To adjust the volume

Adjust using the VOLUME/MEMORY button.

To view still images

1. Slide the POWER switch to VCR.
2. Press the MEMORY/PLAY button.
3. Select still image that you want to look using the VOLUME/MEMORY button.
   To stop viewing still images, press the MEMORY/PLAY button once more.

To display the list of still photos (index screen)

1. Slide the POWER switch to VCR.
2. Press the MEMORY/INDEX button.
3. Select a picture by pressing the VOLUME/MEMORY button.
   To display a single image, move ➪ to that image and press the MEMORY/PLAY button.
   To stop displaying the list of still photos, press the MEMORY/INDEX button again.
Changing the settings of your camcorder recordings

Adjusting the zoom

Move the power zoom lever [C] slightly for a slower zoom. Move it further for a faster zoom.

Wide view: (Wide angle)

Close view: (Telephoto)

Tips

- The minimum distance required between your camcorder and the subject for focus is about 1 cm (about 13/32 in.) for wide angle and about 80 cm (about 2 5/8 feet) for telephoto.
- The focus may not be adjusted at certain zoom positions if the subject is within 80 cm (about 2 5/8 feet) from your camcorder.
- Be sure to keep your finger on the power zoom lever. If you move your finger off the power zoom lever, the operation sound of the power zoom lever may also be recorded.

Using the handle zoom

1. Set the handle zoom switch [B] to H (high) or L (low).

   Tip
   - You can set the zoom speed of the handle zoom lever in [HANDLE ZOOM] (p. 61).

2. Press the handle zoom lever [A] to zoom in or out.

   Notes
   - You cannot adjust the zoom speed by pressing the handle zoom lever.
   - You cannot use the handle zoom lever when the handle zoom switch is set to OFF.
   - You cannot change the zoom speed of the zoom lever [C] with the handle zoom switch [B].

Using the zoom ring

You can zoom at the desired speed by turning the zoom ring [D]. Fine adjustment is also possible.

Note

- Turn the zoom ring at a reasonable speed. If you turn it too fast, the zoom speed may not catch up with the zoom ring rotating speed.

Continued ➔ 33
Adjusting the focus manually

You can adjust the focus manually for different recording conditions.
Use this function in the following cases.
– To record a subject behind a window covered with raindrops.
– To record horizontal stripes.
– To record a subject with little contrast between the subject and its background.
– When you want to focus on a subject in the background.
– To record a stationary subject using a tripod.

1 During recording or standby, press the FOCUS button [A].

2 Rotate the focus ring [D] and adjust the focus.

[��] changes to [▲] when the focus cannot be adjusted any farther. [��] changes to [ ● ] when the focus cannot be adjusted any closer.

Note
• The setting returns to automatic adjustment (default) when you set the POWER switch to OFF (CHG) for more than 12 hours.

Tips
For focusing manually
• It is easier to focus on the subject when you use the zoom function. Move the power zoom lever towards T (telephoto) to adjust the focus, and then, towards W (wide angle) to adjust the zoom for recording.
• When you want to record a close-up image of a subject, move the power zoom lever towards W (wide angle) to fully magnify the image, then adjust the focus.

To restore automatic adjustment
Press the FOCUS button [A] once again. [��] disappears and AUTO FOCUS is restored.

To use AUTO FOCUS temporarily (One push auto focus)
Record the subject while pressing and holding the PUSH AUTO FOCUS button [C].
If you release the button, the setting returns to manual focusing.
Use this function to shift the focus on one subject to another. The scenes will shift smoothly.
**Tip**
- The focal distance information (for when it is dark and hard to adjust the focus) appears for about 3 seconds in the following cases. (It will not be displayed correctly if you are using a conversion lens (optional)).
  - When the focus mode is switched from automatic to manual.
  - When you rotate the focus ring.

**To use the expanded focus**

(Expanded focus)

During standby, press the EXPANDED FOCUS button [B]. [EXPANDED FOCUS] appears and the center of the screen is magnified by about 2 times. It will be easier to confirm the focus setting during manual focusing. The screen returns to the original size when you push the button again.

**Note**
- The image returns to the original size when you press the REC START/STOP button or the PHOTO/EXPANDED FOCUS button.

**Tip**
- You can select the type of a picture on EXPANDED FOCUS ([EXP.FOCUS TYPE] p. 66).

**Adjusting the EXPOSURE/IRIS**

You can adjust the brightness of a picture with the EXPOSURE/IRIS dial [G].

You can assign any one of [EXPOSURE] (the default setting), [IRIS] and [AE SHIFT] to the EXPOSURE/IRIS dial [G] from the menu (p. 59).

**Tips**
- Even if you open the aperture more than F2.8 (i.e. make the iris value smaller, such as F1.6) during camera EXPOSURE/IRIS setting, changing the zoom from wide to telephoto will change the iris to F2.8.
- When the EXPOSURE/IRIS dial is set to [EXPOSURE], [E] appears next to the values that can be set with the EXPOSURE/IRIS dial.

**EXPOSURE** (the default setting)

You can adjust the display brightness by adjusting the iris and gain (the shutter speed remains fixed).

The iris, gain and shutter speed are displayed on the screen.

**Note**
- The GAIN button and the SHUTTER SPEED button are inactive.

**Tip**
- This is handy for changing the brightness of the screen and setting the desired brightness by dial operation.

**IRIS**

You can manually adjust the light volume of the light entering the lens between F1.6 and F11 or close the aperture.

As the iris is opened (smaller aperture values), the light volume increases or the iris is closed (larger aperture values), the light volume decreases. The current aperture value (F) appears on the screen.
Tips

- The range of focus, an important effect of the aperture, is called the depth of field. The depth of field gets shallower as the aperture is opened, and deeper as the aperture is closed. Use the aperture creatively to obtain the desired effect in your photography.
- This is handy for making the background blurred or sharp, or when you want to manually adjust the iris, gain or shutter speed on the screen.

AE SHIFT

You can slightly adjust the exposure between -7 (dark) and +7 (bright) during the auto recording. \[ \text{AS} \] appears.

Notes

- You cannot manually adjust the IRIS.
- [AE SHIFT] does not work when the exposure is manually set or the iris, gain and shutter speed are all set manually.

Tip

- You can adjust the AE SHIFT from the menu (p. 61).

1 During recording or standby, set the AUTO LOCK switch [A] to the center position to release the auto lock mode.

This operation is not required when AE SHIFT is assigned to the EXPOSURE/IRIS dial.

2 Press the EXPOSURE/IRIS button [H].

The EXPOSURE/IRIS dial [G] will be effective.

3 Adjust the picture quality by turning the EXPOSURE/IRIS dial [G].

Tip

- If you set the AUTO LOCK switch [A] to HOLD after manual adjustment, the manually adjusted items are saved.

To restore automatic adjustment

Press the EXPOSURE/IRIS button [H], or set the AUTO LOCK switch [A] to AUTO LOCK.

Notes

- If you set the AUTO LOCK switch [A] to AUTO LOCK, other manually adjusted items (gain, shutter speed, white balance) also become temporarily automatic.
- As you shift the zoom from W (wide) to T (telephoto), the aperture value varies from F1.6 to F2.8.
- The setting returns to automatic adjustment (default) when you set the POWER switch to OFF (CHG) for more than 12 hours.

Tips

- You can adjust the dial sensitivity of the EXPOSURE/IRIS dial [G] by selecting [EXPOSURE/IRIS] \[ \rightarrow \] [DIAL SENS](p. 59), and the dial operating direction by selecting [EXPOSURE/IRIS] \[ \rightarrow \] [DIAL ROTATE] (p. 59).
- Settings can also be checked by pressing the STATUS CHECK button (p. 47).
- See page 62 for [BACK LIGHT].

Adjusting the volume of light (ND filter)

You can record the subject clearly by using the ND filter when the recording environment is too bright.

There are 2 levels of ND filter setting. ND filter 1 reduces the volume of light to about 1/4, and ND filter 2 to about 1/16.
If \( \text{ND}_1 \) flashes during standby mode, set the ND FILTER switch \( \text{F} \) to 1 to turn on the \( \text{ND}_1 \) indicator. If \( \text{ND}_2 \) flashes, set the ND FILTER switch to 2 to turn on the \( \text{ND}_2 \) indicator. If \( \text{ND}_{\text{OFF}} \) flashes, set the ND FILTER switch to OFF to turn off the indicator.

**Notes**
- If you move the ND FILTER switch during recording, the picture and sound may be distorted.
- If you adjust the iris manually, no ND filter indicator will appear even if the ND filter should be activated.

**Tip**
- If you close the iris extensively when recording a bright subject, diffraction may occur, resulting in a fuzzy focus (this is a common phenomenon with video cameras). The ND filter suppresses this phenomenon and gives better recording results.

---

**Displaying the zebra pattern to adjust the brightness**

If there is a part of the screen where brightness is over a certain level, the part may appear excessively white when played back. By displaying the zebra pattern on such a part, you can be reminded to adjust the brightness before recording.

Select the brightness level to display the zebra pattern with the ZEBRA switch \( \text{E} \), then the zebra pattern will appear.

Select the brilliance value from [70] or [100].
- If you select [70], the zebra pattern appears at the part with 70±5 \% of the brilliance signal.
- If you select [100], the zebra pattern appears at the part with 100\% or more.

**To hide the zebra pattern**
- Set the ZEBRA switch \( \text{E} \) to OFF.

**Note**
- The zebra pattern is not recorded on the tape.

---

**Tip**
- This is convenient for adjusting the brightness while a histogram (p. 65) is displayed.

---

**Adjusting the gain**

You can adjust the gain manually when shooting blackish or dark objects if you do not want the AGC (auto gain control) to be activated.

1. During recording or standby, set the AUTO LOCK switch \( \text{A} \) to the center position to release the auto lock.
2. Press the GAIN button \( \text{B} \).
   - The current gain value appears.
3. Adjust the gain by turning the SEL/PUSH EXEC dial \( \text{D} \).
   - The gain can be adjusted between 0dB and 18dB by every 3dB.

**Tip**
- The gain value can be stored temporarily by setting the AUTO LOCK switch \( \text{A} \) to HOLD after the manual adjustment.

**To restore automatic adjustment**

Press the GAIN button \( \text{B} \), or set the AUTO LOCK switch \( \text{A} \) to AUTO LOCK.

**Notes**
- If you set the AUTO LOCK switch \( \text{A} \) to AUTO LOCK, other manually adjusted items (iris, shutter speed, white balance) also become temporarily automatic.
- The setting returns to automatic adjustment when you set the POWER switch to OFF (CHG) for more than 12 hours.

**Adjusting the shutter speed**

You can manually adjust and fix the shutter speed. Depending on the shutter speed, you can make the subject look still, or emphasize the fluidity of movement.

1. During recording or standby, set the AUTO LOCK switch \( \text{A} \) to the center position to release the auto lock mode.
2. Press the SHUTTER SPEED button \( \text{C} \).
Adjusting to Natural Color
(White balance)

You can adjust the white balance according to the light of the recording environment.
You can set two sets of white balance adjustment data separately in memory A and memory B for two different recording conditions with A and B. During recording, you can select the setup data with the SEL/PUSH EXEC dial. The setup data will be retained as long as it is not readjusted even if the power is disconnected.

1. During recording or standby, set the AUTO LOCK switch A to the center position to release the auto lock mode.

2. Press the WHT BAL button B.

3. Display desired item by turning the SEL/PUSH EXEC dial C, then press the dial.
The display changes.  A → B → (OUTDOOR) → (INDOOR)

<table>
<thead>
<tr>
<th>Indicator A (MEMORY A)</th>
<th>B (MEMORY B)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• White balance values adjusted for light sources can be stored in memory A and memory B. Follow the steps below</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>(Outdoor)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Recording a sunset/sunrise, just after sunset, just before sunrise, neon signs, or fireworks.</td>
</tr>
<tr>
<td>• Under daylight color fluorescent lamps</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>(Indoor)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Under the lighting condition that changes quickly</td>
</tr>
<tr>
<td>• Under strong light such as in a photography studio</td>
</tr>
<tr>
<td>• Under sodium lamps or mercury lamps</td>
</tr>
</tbody>
</table>

**Tip**
- The white balance can be stored temporarily by setting the AUTO LOCK switch A to HOLD after the manual adjustment.

**To save the adjusted white balance value in memory A or B**

1. Select A or B according to step 3 of “Adjusting to Natural Color (White Balance).”
2. Shoot something white (such as a sheet of paper) full-screen under the same lighting conditions as the subject.
3. Press the SEL/PUSH EXEC dial C. Pressing the dial switches between blinking A and B.

When the white balance is adjusted, A or B stops blinking and remains on. The adjusted value is now saved in the selected A or B memory.

**To restore the automatic white balance**
Press the WHT BAL button B, or set the AUTO LOCK switch A to AUTO LOCK.

**Notes**
- If you set the AUTO LOCK switch A to AUTO LOCK, other manually adjusted items (iris, gain, shutter speed) also become temporarily automatic.
- The setting returns to automatic adjustment when you set the POWER switch to OFF (CHG) for more than 12 hours.

**Customizing the picture quality (Picture profile)**

You can customize the picture quality by adjusting [COLOR LEVEL], [SHARPNESS], etc. You can set 6 different picture quality settings depending on the recording time of day, the weather, or the camera person, and store them in the memory.

Connect your camcorder to a TV or monitor, and adjust the picture quality while observing the picture on the TV or monitor screen.

At the default setting, [PP1] through [PP6] are registered with picture quality settings for the following recording conditions.
During standby, press the PICTURE PROFILE button.

Select a picture profile number by turning the SEL/PUSH EXEC dial, then press the dial.

Select [OK] by turning the SEL/PUSH EXEC dial.

To cancel the picture profile recording
Select [OFF] in step 2, then press the SEL/PUSH EXEC dial.

To change the picture profile
You can change the settings in [PP1] through [PP6].

1. Press the PICTURE PROFILE button.
2. Select the PICTURE PROFILE number by turning the SEL/PUSH EXEC dial, then press the dial.
3. Select [SETTING] by turning the SEL/PUSH EXEC dial, then press the dial.
4. Select an item to be adjusted by turning the SEL/PUSH EXEC dial, then press the dial.
5. Adjust the picture quality by turning the SEL/PUSH EXEC dial, then press the dial.

### Picture profile number (setting name) | Recording condition
---|---
PP1 :PORTRAIT | Appropriate setting to record people
PP2 :CINEMA | Appropriate setting to record film-like pictures
PP3 :SUNSET | Appropriate setting to record sunset
PP4 :MONOTONE | Appropriate setting to record monotone pictures
PP5 :------ | You can assign your own setting
PP6 :------ | You can assign your own setting.

### Item | Adjustment
---|---
[COLOR LEVEL] | –7 (low) to +7 (high)
[COLOR PHASE] | –7 (greenish) to +7 (reddish)
[SHARPNESS] | 0 (softer) to 15 (clearer)
[SKINTONE DTL] | To make wrinkles less noticeable by suppressing the outlines on the part of skin color.
[TYPE1] (the color range recognized as a skin color is narrow) to [TYPE3] (the color range recognized as a skin color is wide)
[OFF]: no adjustment
[WBSHIFT] | –7 (to make picture bluish) to +7 (to make white parts reddish)
[CINEMATONE GAMMA] | When you set [ON], pictures are recorded with the gamma curve that reproduces the natural gradation sequence, similar to that of film cameras.
### Recording/Playback

**Repeat steps 4 and 5 to adjust other items.**

**Select [RETURN] by turning the SEL/PUSH EXEC dial [A], then press the dial.**

**Select [OK] by turning the SEL/PUSH EXEC dial [A], then press the dial.**

A picture profile indicator appears.

**Note**

- In the case of [TYPE3] of [SKINTONE DTL], the effect may also be applied to a color that is not a skin color.

**To check the picture profile settings**

During recording or standby, press the STATUS CHECK button [B] (p. 47).

**Tip**

- You can assign picture profiles to the ASSIGN buttons and use them to turn the picture profiles on and off (p. 42).

**To name the picture profile settings**

You can name on picture profile 1–6.

1. Press the PICTURE PROFILE button [C].
2. Select the picture profile that you want to name by turning the SEL/PUSH EXEC dial [A], then press the dial.
3. Select [SETTING] → [PROFILE NAME] by the SEL/PUSH EXEC dial [A].
4. Select a letter by turning the SEL/PUSH EXEC dial [A], then press the dial. Repeat this operation until a complete name is entered.

**Tips**

- Each name can be up to 12 characters long.
- Characters that can be used in profile names:
  - A–Z
  - 0–9
  - _/\# & : . @

5. Select [OK] by turning the SEL/PUSH EXEC dial [A], then press the dial. The profile name is changed.
6. Select [RETURN] → [OK] by the SEL/PUSH EXEC dial [A].

**To copy the picture profile setting to other picture profiles**

1. Press the PICTURE PROFILE button [C].
2. Select the picture profile that you want to copy from by turning the SEL/PUSH EXEC dial [A], then press the dial.
3. Select [SETTING] → [COPY] by SEL/PUSH EXEC dial [A].
4. Select the number of the picture profile that you want to copy to by turning the SEL/PUSH EXEC dial [A], then press the dial.
5. Select [YES] by turning the SEL/PUSH EXEC dial [A], then press the dial.
6. Select [RETURN] → [OK] by the SEL/PUSH EXEC dial [A].
Changing the settings of your camcorder recordings (Continued)

To reset the picture profile settings
You can reset the picture profile settings by each picture profile number. You cannot reset all picture profile settings at once.
1 Press the PICTURE PROFILE button C.
2 Select the picture profile by turning the SEL/PUSH EXEC dial A, then press the dial.
3 Select [SETTING] → [RESET] → [YES] → [RETURN] → [OK] by the SEL/PUSH EXEC dial A.

Assigning the functions to the ASSIGN buttons
You may need to assign some functions to the ASSIGN buttons. You can assign a single function to each the ASSIGN button 1 to 6.

Functions you can assign to the ASSIGN buttons
- MARKER (p. 66)
- D.EXTENDER (p. 63)
- FOCUS INFNTY (p. 43)
- REC REVIEW (p. 44)
- END SEARCH (p. 44)
- INDEX MARK (p. 44)
- PEAKING (p. 65)
- STEADYSHOT (p. 60)
- COLOR BAR (p. 60)
- SPOTLIGHT (p. 63)
- BACK LIGHT (p. 62)
- FADER (p. 63)
- DISPLAY (p. 47)
- Picture profile (p. 39)
- SHOT TRANS (p. 45)

⚠️ Note
- The ASSIGN buttons 4 to 6 are exclusively used for memory playback when the POWER switch is set to VCR, and cannot be used as ASSIGN buttons. You cannot assign functions to the ASSIGN buttons 4 to 6 while the POWER switch is set to VCR.
1 Press the MENU button A.

2 Select the [OTHERS] → [ASSIGN BTN] by the SEL/PUSH EXEC dial B.

3 Select the number of the ASSIGN button (ASSIGN 1-6, [SHOT TRANS]) you want to assign the function by turning the SEL/PUSH EXEC dial B, then press the dial.
   • [------] is displayed at the number that no function is assigned.
   • When you select [SHOT TRANS], select [YES], then proceed to step 6.

4 Select the function to be assigned by turning the SEL/PUSH EXEC dial B, then press the dial.

5 Select [OK] by turning the SEL/PUSH EXEC dial B, then press the dial.

6 Press the MENU button A to hide the menu.

Tips
• Shot transition is assigned to the ASSIGN buttons 1, 2 and 3 (p. 45). Cancel the shot transition assignment to return to the pre-setting assignment.
• To cancel the shot transition, select [SHOT TRANS] → [YES] in step 3.

Focusing on a distant subject (Focus infinity)

Note
• [FOCUS INFNTY] is only available during the manual focus. It is not available during the auto focus.

1 Assign [FOCUS INFNTY] to one of the ASSIGN buttons (p. 42).

2 Press the ASSIGN button assigned to [FOCUS INFNTY].
   • [ appears. If you release the switch, it returns to manual focusing.
   Use this function to record a distant subject when the focus is automatically set on a close subject.
Assigning the functions to the ASSIGN buttons (Continued)

### Recording an index signal

If you make an index for a scene, you can easily search for the scene later (p. 50). The index function will make it easier to check the transition of recording or edit your pictures using index signals.

1. Assign [INDEX MARK] to one of the ASSIGN buttons in advance (p. 42).

2. Press the ASSIGN button assigned to [INDEX MARK].
   - **When pressed during recording** 
     - appears for about 7 seconds and an index signal is recorded.
   - **When pressed during standby** 
     - flashes.

After you press the REC START/STOP button to start recording, appears for about 7 seconds and an index signal is recorded.

### Reviewing the most recently recorded scenes (Rec review)

You can view about 2 seconds of the scene recorded just before you stopped the tape. This is convenient during playback of the latest scene check.

1. Assign [REC REVIEW] to one of the ASSIGN buttons in advance (p. 42).

2. Press the ASSIGN button assigned to [REC REVIEW] during standby mode.
   - The last 2 seconds (approx.) of the most recently recorded scene are played back. Then, your camcorder is set to the standby.

### Searching for the last scene of the most recent recording (End search)

1. Assign [END SEARCH] to one of the ASSIGN button in advance (p. 42).

**Note**
- End search will not work correctly when there is a blank section between recorded sections on the tape.

---

**To cancel the operation**

Before starting to record, press the ASSIGN button assigned to [INDEX MARK] again.

**Note**
- You cannot record an index signal on a recorded tape afterward.
2 Press the ASSIGN button to which [END SEARCH] is assigned.

The last scene of the most recent recording is played back for about 5 seconds, and the camcorder enters the standby mode at the point where the last recording has finished.

Note
- The End search function will not work correctly when there is a blank section between recorded sections on the tape.

Using the Shot transition

You can register the settings of focus, zoom, iris, gain, shutter speed, and white balance, and then change the recording setting from the current one to the registered one, resulting in a smooth transition of scenes (Shot transition). For example, you can shift the focus from closer objects to farther objects, or change the depth of field by adjusting the iris. In addition, you can develop scenes under different recording conditions smoothly. If you register the manual adjustment function of the white balance, the scenes will develop smoothly between objects indoor and those outdoor.

Use a tripod to avoid camera-shake.

1 Assign [SHOT TRANS] to the ASSIGN buttons (p. 42).

Tip
- Shot transition is assigned to ASSIGN buttons 1, 2 and 3.

2 Store the settings (shot)

① Press the ASSIGN button 1 repeatedly to bring up the SHOT TRANSITION STORE screen.

② Adjust the desired items manually. See pages 33 to 39 for details on adjustment.

③ Press the ASSIGN button 2 for storing the setting in SHOT-A, or the ASSIGN button 3 for storing the setting in SHOT-B.

Note
- The setting values assigned to SHOT-A and SHOT-B are deleted when the POWER switch is turned to OFF (CHG).
Assigning the functions to the ASSIGN buttons (Continued)

3 Check the stored settings

① Press the ASSIGN button 1 repeatedly to bring up the SHOT TRANSITION CHECK screen.

② Press the ASSIGN button 2 to check the SHOT-A. Press the ASSIGN button 3 to check the SHOT-B.
   The selected setting will take effect on the picture on the screen. The focus, zoom, and so on, are automatically adjusted as stored in the setting.

Note

• You cannot check the transition time and curve set using [SHOT TRANS] (p. 62).

4 Record using the shot transition function

① Press the ASSIGN button 1 repeatedly to bring up the SHOT TRANSITION EXEC screen.

② Press the REC START/STOP button.

③ Press the ASSIGN button 2 to record movie using the SHOT-A. Press the ASSIGN button 3 to record movie using the SHOT-B.
   Pictures will be recorded with the settings that are changed automatically from the current ones to the stored ones.

Tip

• Press the ASSIGN button 1 repeatedly to cancel the SHOT TRANSITION.

Notes

• You cannot zoom, focus, or adjust manually while checking or activating the Shot transition.
• When you change [SHOT TRANS] (p. 62), press the ASSIGN button 1 repeatedly to exit the shot transition screen.
• You cannot return from the stored SHOT-A or SHOT-B settings to previous settings after you activate the shot transition during recording.
• If you press the following buttons during the shot transition operation, the operation is canceled:
  – PICTURE PROFILE
  – MENU
  – EXPANDED FOCUS
  – STATUS CHECK

Tips

• You can also make a transition from saved SHOT-A to saved SHOT-B or vice versa. For example, to make a transition from SHOT-A to SHOT-B. Display the shot transition CHECK screen, press the ASSIGN button 2 and press the REC START/STOP button. Next, display the shot transition EXEC screen and press the ASSIGN button 3.
• You can rehearse the shot transition by pressing the ASSIGN button 2 or 3, in which the desired setting was stored, before pressing the REC START/STOP button in step 4.

To cancel the operation

Press the ASSIGN button 1 repeatedly to exit the shot transition screen.
Changing/checking the settings in your camcorder

You can turn on and off the display of the time code, tape counter, and other information on the screen.

Press the DISPLAY/BATT INFO button [C].
The screen indicators turn on (displayed) and off (undisplayed) as you press the button.

💡 Tip
- You can display the screen indicators during playback on a TV. Select [DISP OUTPUT], then [V-OUT/PANEL] (p. 68).

Displaying the settings in your camcorder (Status check)

You can check the setup value of the following items.
- Audio setup such as [DV AUDIO MIX] (p. 64)
- Output signal setup ([VCR HDV/DV], etc.) (p. 69)
- Functions assigned to the ASSIGN buttons (p. 42)
- Camera setup. (p. 59)
- Picture profile (p. 39)

1 Press the STATUS CHECK button [B].

2 Turn the SEL/PUSH EXEC dial [A] to display the desired item.
When the POWER switch is set to CAMERA, the items appear in the following order:
  AUDIO → OUTPUT → ASSIGN → CAMERA → PICT.PROFILE
When the POWER switch is set to VCR, the items appear in the following order:
  AUDIO → OUTPUT → ASSIGN

⚠️ Note
- When [PICT.PROFILE] is set to [OFF], the settings of PICTURE PROFILE are not displayed.

To turn off the setup value
- Press the STATUS CHECK button [B].

Continued ➔ 47
Checking the remaining battery (Battery Info)

Set the POWER switch to OFF (CHG), then press the DISPLAY/BATT INFO button [C]. The approximate recordable time in the selected format and battery information appear for about 7 seconds. You can view the battery information for up to 20 seconds by pressing the button again while the information is displayed.

Remaining battery (approx.)

Recording capacity (approx.)
Locating a scene on a tape

3 Press \(\text{REW} \, [3]\).
The tape stops automatically when the
tape counter reaches “0:00:00.”
The tape counter returns to the time
code display, and the zero set memory
display disappears.

4 Press \(\text{PLAY} \, [5]\).
Playback starts from the point
designated “0:00:00” on the tape
counter.

To cancel the operation
Press \(\text{ZERO SET MEMORY} \, [4]\) again
before rewinding.

Notes
- There may be a discrepancy of several seconds
between the time code and the tape counter.
- Zero set memory will not function correctly if
there is a blank section between recorded
sections on the tape.

Searching for a scene by date of
recording (Date search)

You can locate the point where the
recording date changes.

1 Set the POWER switch to VCR.

2 Press \(\text{SEARCH M.} \, [1]\) on the
Remote Commander repeatedly
to select [DATE SEARCH].
Locating a scene on a tape (Continued)

3 Press I ◄ (previous)/ ►► I (next) 2 on the Remote Commander to select a recording date.
   You can select the previous or the next date of the present point on the tape.
   Playback starts automatically from the point where the date changes.

To cancel the operation
Press STOP 6 on the Remote Commander.

Notes
• If one day’s recording is less than 2 minutes, your camcorder may not accurately find the point where the recording date changes.
• The Date search will not function correctly when there is a blank section between recorded sections on the tape.

Searching for a recording start point (Index search)
You can locate the point where an index signal is recorded (p. 44).

1 Set the POWER switch to VCR.

2 Press SEARCH M. 1 on the Remote Commander repeatedly to select [INDEX SEARCH].

3 Press I ◄ (previous)/ ►► I (next) 2 on the Remote Commander to select an index point.
   You can select the index signal of the point that you want to start playing back the tape.

Playback starts automatically from the point where the selected index signal is recorded.

To cancel the operation
Press STOP 6 on the Remote Commander.

Notes
• If index recording is less than 2 minutes, your camcorder may not accurately find the index point.
• The Index search will not function correctly when there is a blank section between recorded sections on the tape.
Playing the picture on a TV

Connection methods and image quality differ depending on what type of TV is connected and connectors used.
Use the supplied AC Adaptor to obtain AC power (p. 18).
Refer also to the instruction manuals supplied with the device to be connected.

Selecting the connection method according to your TV type and connectors

High definition TV

HD (high definition) image quality*
• An HDV formatted picture is played back as it is (HD image quality).
• A DV formatted picture is played back as it is (SD image quality).

16:9 (wide) or 4:3 TV

SD (standard definition) image quality*
• An HDV formatted picture is down converted to DV format (SD image quality) and played back.
• A DV formatted picture is played back as it is (SD image quality).

Notes
• Make all menu settings on your camcorder before connecting. The TV may not recognize the video signal properly when changing [VCR HDV/DV] and [i.LINK CONV] settings after connecting with an i.LINK cable.
• Pictures recorded in the DV format are played back as SD (standard definition) images regardless of the connection.
Jacks on your camcorder
Open the jack cover and connect the cable.

Connecting to a high definition TV

<table>

</tr>
<tr>
<td>3</td>
<td></td>
<td>A/V connecting cable (supplied)</td>
<td>AUDIO</td>
<td></td>
</tr>
</tbody>
</table>

Note
- An A/V connecting cable is also needed to output audio signals. Connect the white and red plugs of the A/V connecting cable to the audio input jack of your TV.
### Notes
- **Use an HDMI cable with the HDMI logo.**
  - Pictures in the DV format are not output from the HDMI OUT jack, if copyright protection signals are recorded in the pictures.
  - DV format pictures input to the camcorder via i.LINK cable (p. 76) cannot be output.
  - Your TVs may not function correctly (for example, no sound or image). Do not connect the HDMI OUT jack of your camcorder and HDMI OUT jack of the external device with the HDMI cable. This may cause a malfunction.

### Tip
- HDMI (High Definition Multimedia Interface) is an interface to send both video and audio signals. Connecting HDMI OUT jack to an external device supplies high quality images and digital audio to you.

### Notes
- **Your TV needs to have an i.LINK jack compatible with HDV1080i. For details, confirm the specifications of your TV.**
  - If your TV is not compatible with HDV1080i, connect your camcorder and TV with the supplied component video cable and A/V connecting cable as illustrated in A.
  - The TV needs to be set so that it recognizes that the camcorder is connected. See the instruction manuals supplied with your TV.
  - This camcorder has a 4-pin i.LINK terminal. Select a cable that fits the terminal on the device to be attached.
Connecting to a 16:9 (wide) or 4:3 TV

To set the aspect ratio according to the connected TV (16:9/4:3)

Change [TV TYPE] setting to match your TV (p. 70).

Note
- When you play back a tape recorded in the DV format on a 4:3 TV not compatible with the 16:9 signal, set [DV WIDE REC] to [OFF] on your camcorder when recording a picture (p. 70).

Tip
- When your TV is monaural (When your TV has only one audio input jack), connect the yellow plug of the A/V connecting cable to the video input jack and connect the white (left channel) or the red (right channel) plug to the audio input jack of your TV or VCR. When you want to play the sound in monaural mode, use a connecting cable for that purpose.

*: Signal flow

</tr>
</tbody>
</table>

Note
- A/V connecting cable is also needed to output audio signals. Connect the white and red plugs of the A/V connecting cable to the audio input jack of your TV.

Notes
- The TV needs to be set so that it recognizes that the camcorder is connected. See the instruction manuals supplied with your TV.
- This camcorder has a 4-pin i.LINK terminal. Select a cable that fits the terminal on the device to be attached.
Recording/Playback

Change the settings according to the TV connected.

Notes

- If you connect your camcorder to your TV using more than one type of cable to output images from a jack other than the i.LINK jack, the order of priority of the output signals is as follows:
  - HDMI → component video → S VIDEO → audio/video.
- See page 110 for the details of i.LINK.

When connecting to your TV via a VCR

Select the connecting method on page 76 depending on the input jack of the VCR. Connect your camcorder to the LINE IN input on the VCR using the A/V connecting cable. Set the input selector on the VCR to LINE (VIDEO 1, VIDEO 2, etc.).

Using the Menu

(CAMERA SET) menu

Settings to adjust your camcorder to the recording conditions (EXPOSURE/IRIS/STEADYSHOT/BACK LIGHT, etc.)

The default settings are marked with ▶.
The indicators in parentheses appear when the items are selected.
See page 56 for details on selecting menu items.

Press the MENU button → select the (CAMERA SET) by turning the SEL/PUSH EXEC dial.

EXPOSURE/IRIS

□ DIAL ASSIGN
You can select assign settings with the EXPOSURE/IRIS dial from [EXPOSURE] (default settings), [IRIS] and [AE SHIFT] (p. 35).

◆ Note
• If you change the assign function from EXPOSURE/IRIS to other function, manually adjusted items (iris, gain, shutter speed) also become automatic.

□ DIAL SENS
You can select the EXPOSURE/IRIS dial sensitivity from [HIGH], [MIDDLE] (default settings) or [LOW].

□ DIAL ROTATE
You can select the rotation direction of the EXPOSURE/IRIS dial.

▶ NORMAL
You can change the screen brightness by turning the dial up.

OPPOSITE
You can change the screen brightness by turning the dial down.

SMTH SLW REC (Smooth slow recording)

Fast moving subjects and actions, which cannot be captured under the general shooting conditions, can be shot in smooth moving slow-motion.
This is useful to shoot fast actions such as a golf or tennis swing.

Select [EXECUTE], and press the REC START/STOP button on the [SMTH SLW REC] screen.
An about-6-second movie is recorded as a 24-second slow-motion movie.
When [Recording···] disappears, recording is finished.

Select [TIMING] to select one of the following start points for recording before pressing the REC START/STOP button.

[6sec AFTER]*
[6sec BEFORE]

* The default setting is [6sec AFTER].

To cancel [SMTH SLW REC], press the MENU button.

◆ Notes
• Sounds cannot be recorded.
• [SMTH SLW REC] settings are automatically canceled when you switch off your camcorder.
• Recording time is estimated time. The recording time may be shorter than the set time according to recording condition.

Continued ➤ 59
Press the MENU button ➔ select the ⌀(CAMERA SET) by turning the SEL/PUSH EXEC dial.

**CNTRST ENHCR**

Since the default setting is [ON], high contrast images, such as backlit scene images, are detected and unexposed shadows of the images are automatically reduced.

⚠️ Note
- When you set [BACK LIGHT] to [ON], [CNTRST ENHCR] is temporarily turned off.

**STEADYSHOT**

- **ON/OFF**
  You can compensate for camera shake (the default setting is [ON]). Set [ON/OFF] to [OFF] (・) when using a tripod (optional), then the image becomes natural.

- **TYPE**
  You can select the type of the SteadyShot function that compensates for camera-shake.

  **HARD**
  Select to activate the SteadyShot function with stronger effect. This mode is not recommended for recording with camera pan, tilt technique.

  **STANDARD**
  Select to activate the standard SteadyShot function.

  **SOFT**
  Select to activate the SteadyShot function so that it leaves a slight unsteadiness on the picture so the picture looks natural.

  **WIDE CONV.**
  Select when a wide conversion lens (optional) is attached. This mode is the most effective with Sony VCL-HG0862 wide conversion lens.

**COLOR BAR**

- **ON/OFF**
  You can display the color bar or record it on the tape by setting to [ON]. It is convenient to adjust the color on the monitor connected (the default setting is [OFF]).

  ⚠️ Note
- This is automatically set to [OFF] the next time you switch on the camcorder.

- **TYPE**
  You can select the color bar type.

  ![TYPE 1]
  ![TYPE 2]
  ![TYPE 3]

**AF ASSIST**

When you set [AF ASSIST] to [ON], you can briefly focus manually by turning the focus ring during the auto focus. (The default setting is [OFF]).
You can adjust the exposure between -7 (dark) and +7 (bright) using the SEL/PUSH EXEC dial. The and the setting value appear when [AE SHIFT] is set to anything other than the default setting.

Note
- If you adjust all of the iris, gain, shutter speed manually, you cannot obtain the effect of [AE SHIFT].

You can select the speed to adjust the exposure automatically, in accordance with the brightness of the subject. [FAST], [MIDDLE], and [SLOW] are available (the default setting is [FAST]).

You can select the upper limit for the Auto Gain Control (AGC) from [OFF] (18dB, the default setting), [12dB], [6dB] or [0dB].

Note
- If you adjust the gain manually, you cannot obtain the effect of [AGC LIMIT].

You can select the highest iris value for the automatic adjustment from [F11] (the default settings), [F5.6], [F4].

Note
- If you adjust the iris manually, you cannot obtain the effect of [AT IRIS LMT].

You can set the auto white balance operation under a reddish light source such as an incandescent lamp or candle, or under a blueish light source such as in outdoor shade.

INTELLIGENT
Adjustment is automatically performed to achieve a natural atmosphere according to the brightness of the scene.

HIGH
Redness or blueness will decrease.

MIDDLE
Low
Redness or blueness will increase.

Notes
- This is only effective when white balance is adjusted automatically.
- [AWB SENS] is not effective under a clear sky or the sun.

FLCKR REDUCE
ON
Select to record under normal conditions. Flickering of the screen under a light source such as fluorescent lamps will be reduced.

OFF
Select when you do not want to reduce flickering of the screen.

Note
- Flickering may not be reduced depending on the light source.

HANDLE ZOOM
You can change the zoom speed of handle zoom switch positions H and L (p. 33).

H
You can select the zoom speed of position H of the handle zoom switch from 1 (slow) through 8 (fast) (the default setting is 6).

L
You can select the zoom speed of position L of the handle zoom switch from 1 (slow) through 8 (fast) (the default setting is 3).
Select this setting to set the transition time and curve. See page 45 for details on using the shot transition function.

**TRANS TIME**
Select transition time ([3.5 sec] to [15.0 sec] seconds, the default setting is [4 sec]).

**TRANS CURVE**
Select the transition curve. The transition curve changes as follows.
*1: parameter level
*2: transition of time

**LINEAR**
Make the transition linearly.

**SOFT STOP**
Make the transition slowly at the end.

**SOFT TRANS**
Make the transition slowly at the beginning and end, and linearly in between.

Press the MENU button to select the (CAMERA SET) by turning the SEL/PUSH EXEC dial.

**SHOT TRANS**

ASSIGN button 1 several times before changing [TRANS TIME] or [TRANS CURVE] setting.

**DV FRAME REC**

You can record pictures with a stop-motion animated effect by alternately recording a few frames and then moving the subject a little. Operate your camcorder using the Remote Commander to prevent camera shake.

**OFF**
Select to record in the standard recording mode.

**ON ( )**
Select to record pictures using the DV FRAME REC function.

1. Select [ON] by the SEL/PUSH EXEC dial.
2. Press the MENU button to hide the menu screen.
3. Press the REC START/STOP button. A picture (approximately 6 frames) is recorded, and your camcorder enters the standby mode.
4. Move the subject and repeat step 3.

**Note**
- When you use frame recording continuously, the remaining tape time will not be indicated correctly.
- The last scene will be longer than other scenes.
- You cannot record index signals during frame recording.
- This is automatically set to [OFF] if you turn the power off and back on.

**BACK LIGHT**

When you set [BACK LIGHT] to [ON], is displayed and the back light function is enabled (the default setting is [OFF]).

**Notes**
- The back light function is canceled when you set [SPOTLIGHT] to [ON].
You cannot use the back light function if 2 or more items out of iris, gain, and shutter speed are adjusted manually.

The setting returns to [OFF] when you set the POWER switch to OFF (CHG) for more than 12 hours.

**SPOTLIGHT**

When you set [SPOTLIGHT] to [ON] ( ), you can reduce overexposed highlights on faces of people who are under strong light, such as on a stage, during recording (the default setting is [OFF]).

**Notes**

- The spotlight function is canceled when you set [BACK LIGHT] to [ON].
- You cannot use the spotlight function if 2 or more items out of iris, gain, and shutter speed are adjusted manually.
- The setting automatically returns to [OFF] (default) when you set the POWER switch to OFF (CHG) for more than 12 hours.

**D.EXTENDER (Digital Extender)**

When you set [D.EXTENDER] to [ON] ( ), the image is displayed about 1.5 times larger. The picture quality deteriorates due to the digital process. You can enlarge images of distant subjects such as wild birds. (The default setting is [OFF]).

**Note**

- This is automatically set to [OFF] if you turn the power off and back on.

**FADER**

You can record a transition with the following effects adding to the interval between scenes.

1. Select the desired effect in [STBY] (during fading in) or [REC] (during fading out) mode.
2. Press the REC START/STOP button.
   The fader indicator stops flashing and disappears when the fade is complete.

To cancel before starting the operation, select [OFF] in step 1.
Once you press the REC START/STOP button, the setting is canceled.

**Note**

- This is automatically set to [OFF] if you turn the power off and back on.
(AUDIO SET) menu

Settings for the audio recording (AUDIO REC LV/DV AU. MODE, etc.)

The default settings are marked with ▶.
The indicators in parentheses appear when the items are selected.
See page 56 for details on selecting menu items.

Press the MENU button → select the (AUDIO SET) by turning the SEL/PUSH EXEC dial.

AUDI0 REC LV

You can adjust the recording sound level manually.

AUTO/MANUAL

▶AUTO
Select [AUTO] to adjust the recording sound level automatically.

MANUAL ( )
Select [MANUAL] to adjust the recording sound level during recording or standby.

LEVEL

You can adjust the recording sound level when you set [AUDIO REC LV] to [MANUAL]. The recording sound level increases as the level bars go to the right.

Tips
• Use headphones to monitor the sound when adjusting it.
• The setting returns to [AUTO] when you set the POWER switch to OFF (CHG) for more than 12 hours.

DV AU. MODE (DV Audio mode) DV

▶12BIT
Records in the 12-bit mode (2 stereo sounds).

16BIT ( )
Records in the 16-bit mode (1 stereo sound with high quality).

Note
• When recording in the HDV format, sound is automatically recorded in [16BIT] mode.

MULTI-SOUND

You can select whether to play back audio recorded using other devices with dual sound or stereo sound.

▶STEREO
Plays back with main and sub sound (or stereo sound).

1
Plays back with main sound (or the left channel sound).

2
Plays back with sub sound (or the right channel sound).

Notes
• You can play back, but cannot record a dual sound track cassette on your camcorder.
• The setting automatically returns to [STEREO] (default) when you set the POWER switch to OFF (CHG) for more than 12 hours.

DV AUDIO MIX DV

You can monitor the sound recorded on the tape with audio dubbing or 4ch microphone recording during playback.

▶ST1
Select to output only the originally recorded sound.

MIX
Select to synthesize and output the originally recorded sound and the sound added afterwards.

ST2
Select to output only the sound added afterwards.
Using the Menu

Notes

- You cannot adjust the balance of the sound recorded on a tape in the 16-bit DV audio mode.
- The setting automatically returns to the default setting when you set the POWER switch OFF (CHG) for more than 12 hours.

(DISPLAY SET)

Menu

Display settings of the display and the viewfinder (MARKER/VF B.LIGHT/DATA CODE, etc.)

The default settings are marked with ▶. The indicators in parentheses appear when the items are selected. See page 56 for details on selecting menu items.

Press the MENU button → select the (DISPLAY SET) by turning the SEL/PUSH EXEC dial.

PEAKING

■ ON/OFF
When you set [PEAKING] to [ON], the outline of the subject on the screen is enhanced for easier focusing. (The default setting is [OFF]).

■ COLOR
[WHITE], [RED], [YELLOW] are available for the outline color. (The default setting is [WHITE].)

■ LEVEL
[HIGH], [MIDDLE], [LOW] are available for the outline level. (The default setting is [MIDDLE].)

Note
- The image with enhanced outline is not recorded on the tape.

Tip
- This makes focusing easier when used with expanded focus display (p. 35).

HISTOGRAM

When you set [HISTOGRAM] to [ON], [HISTOGRAM] (a graph to display a distribution of tones in your picture) window appears on the screen (the default setting is [OFF]).
Press the MENU button → select the (DISPLAY SET) by turning the SEL/PUSH EXEC dial.

This item is useful when you adjust exposure. You can adjust EXPOSURE/IRIS while checking [HISTOGRAM] window (p. 35). [HISTOGRAM] will not be recorded on a tape or “Memory Stick Duo.”

Tips

- The left area on the graph shows the darker areas of the picture while the right area shows the brighter areas.
- If you set ZEBRA to [70] or [100], the guide is displayed (p. 37).

MARKER

When you set [ON/OFF] to [ON], you can display [CENTER] and [GUIDEFRAME] markers.

- **ON/OFF**
  - When you select [ON], a marker is displayed (the default setting is [OFF]). The marker is not recorded.

- **CENTER**
  - When you set [CENTER] to [ON], the marker is displayed at the center of the screen (the default setting is [ON]).

- **GUIDEFRAME**
  - When you set [GUIDEFRAME] to [ON], the marker for checking the horizontal and vertical positions of the subject is displayed (the default setting is [OFF]).

Note

- Screen indicators are not output from the analog jacks when a marker is displayed.

Tips

- You can display the center marker and the guideframe marker at the same time.
- You can obtain a balanced composition by positioning the subject at the cross points of the guideframe marker.
- Markers are displayed only on the LCD panel and viewfinder (they are not output from the jacks).

EXP. FOCUS TYPE

You can set a type of the expanded focus display.

**TYPE 1**

Simply enlarges images.

**TYPE 2**

Enlarges and shows images in white and black.

CAM DATA DSP (Camera data display)

When you set [CAM DATA DSP] to [ON], the iris, shutter speed, and gain settings are constantly displayed (the default setting is [OFF]).

Tips

- When set to manual, the values are displayed regardless of the camera data display settings.
- ▲ indicates auto settings.
Using the Menu

- The items displayed by setting [CAM DATA DSP] to [ON] are different from the items that will be displayed when [DATA CODE] is set to [CAMERA DATA] (p. 67).

### AU.LVL DISP (Audio level display)

Since the default setting is [ON], audio level meter is displayed.

![Audio level meter](image)

### LCD BRIGHT

You can adjust the LCD bright using the SEL/PUSH EXEC dial. The brightness of recorded pictures is not affected.

💡 Tip
- You can also turn off the LCD backlight (p. 22).

### LCD COLOR

You can adjust the LCD color intensity using the SEL/PUSH EXEC dial. The color of recorded pictures is not affected.

### LCD BL LEVEL

You can adjust the brightness of the LCD screen’s backlight.

- **NORMAL**
  - Standard brightness.
- **BRIGHT**
  - Brightens the LCD screen.

💡 Notes
- When you connect your camcorder to outside power sources, [BRIGHT] is automatically selected for the setting.
- When you select [BRIGHT], the recordable time with the battery is slightly reduced.

### VF B.LIGHT

You can adjust the brightness of the viewfinder.

- **NORMAL**
  - Standard brightness.
- **BRIGHT**
  - Brightens the viewfinder screen.

💡 Notes
- When you connect your camcorder to outside power sources, [BRIGHT] is automatically selected for the setting.
- When you select [BRIGHT], the recordable time with the battery is slightly reduced.

### VF POWERMODE

- **AUTO**
  - When the LCD screen is closed or during reverse shooting, the finder is lit.
- **ON**
  - The LCD screen and finder are always lit.

### DATA CODE

During playback, you can display the information (data code) recorded automatically at the time of recording is displayed.

- **OFF**
  - Data code is not displayed.
- **DATE**
  - Displays the date and time.
- **CAMERA DATA**
  - Displays camera setting data.

Continued ➔ 67
Press the MENU button → select the (DISPLAY SET) by turning the SEL/PUSH EXEC dial.

1 SteadyShot off
2 Exposure
   AUTO is displayed when shooting with automatic adjustment of iris/gain/shutter speed, and MANUAL is displayed when shooting with manual adjustment.
3 Iris
  CLOSE is displayed in the iris value display area when you manually set the iris value to the maximum.
4 Gain
5 Shutter speed
6 White balance
   PB is displayed when you play back images recorded using shot transition.

Notes
- The exposure adjustment value (0EV), the shutter speed, and the iris value appear when still images on a “Memory Stick Duo” are played back.
- In the DATE display, the date and time are displayed in the same area. If you record a picture without setting the clock, [---- -- --] and [--:--:--] will appear.

LETTER SIZE

- NORMAL
  Select to display the menu screen at normal size.

- 2x
  Select to display the selected menu item at double the normal height.

REMAINING

- AUTO
  Displays the remaining tape indicator for about 8 seconds in situations such as those described below.
  - When you set the POWER switch to VCR or CAMERA with a cassette inserted.
  - When you press (PLAY) or the DISPLAY/BATT INFO button.

- ON
  Always displays the remaining tape indicator.

DISP OUTPUT

- LCD PANEL
  Shows displays such as the time code on the LCD screen and in the viewfinder.

- V-OUT/PANEL
  Shows displays such as the time code on the TV screen, LCD screen, and in the viewfinder.
(IN/OUT REC) menu

Recording settings, input and output settings (VCR HDV/DV/DV REC MODE/ DV WIDE REC/ TV TYPE, etc.)

The default settings are marked with ◀. The indicators in parentheses appear when the items are selected. See page 56 for details on selecting menu items.

Press the MENU button → select the (IN/OUT REC) by turning the SEL/PUSH EXEC dial.

REC FORMAT

You can select a recording format.

▶ HDV1080i (HDV1080i)
  Records in the HDV1080i specification.

DV (DV)
  Records in the DV format.

Note
  • When you output the recording picture using an i.LINK cable, set [i.LINK CONV] (p. 70) accordingly.

VCR HDV/DV

You can select the playback signal. Normally select [AUTO].

When your camcorder is connected to another device using an i.LINK cable, select the signal to input/output from the HDV/DV interface (i.LINK). The selected signal is recorded or played back.

▶ AUTO
  Switches the signals between HDV and DV formats automatically when playing back a tape.
  During i.LINK connection, switches the signals between HDV and DV formats automatically, and inputs/outputs from the HDV/DV interface (i.LINK).

HDV (HDV1080i)

Plays back only the portions recorded in HDV format.
During i.LINK connection, inputs/outputs only HDV formatted signals from the HDV/DV interface (i.LINK), and records/plays back. You can also select this when connecting the camcorder to a computer, etc.

DV (DV)
Plays back only the portions recorded in DV format.
During i.LINK connection, inputs/outputs only DV formatted signals from the HDV/DV interface (i.LINK), and records/plays back. You can also select this when connecting the camcorder to a computer, etc.

Notes
  • Disconnect the i.LINK cable before changing [VCR HDV/DV] setting. Otherwise, the connected device, such as a VCR, may not be able to recognize the video signal from your camcorder.
  • When [AUTO] is selected and the signal switches between HDV and DV formats, the picture and sound are interrupted temporarily.
  • When [i.LINK CONV] is set to [ON], pictures are output as follows:
    – at [AUTO], an HDV signal is converted to the DV format and output; a DV signal is output as it is.
    – at [HDV], an HDV signal is converted to the DV format and output; a DV signal is not output.
    – at [DV], a DV signal is output as it is; an HDV signal is not output.

DV REC MODE (DV Recording mode) DV

This function is effective only when [REC FORMAT] is set to [DV].

▶ SP (SP)
  Records in the SP (Standard Play) mode on a cassette.
LP (LP)
Increases the recording time to 1.5 times the SP mode (Long Play).

Notes
- If you record in the LP mode, a mosaic-like noise may appear or sound may be interrupted when you play back the tape on other camcorders or VCRs.
- When you mix recordings in the SP mode and in the LP mode on one tape, the playback picture may be distorted or the time code may not be written properly between the scenes.
- You cannot choose the LP mode for the HDV format recording.

DV WIDE REC
You can select the aspect ratio for recording according to a type of your TV. Refer also to the instruction manuals supplied with your TV.

➤ ON
Records pictures in the size that matches the full screen of a 16:9 (wide) TV.

OFF (4:3)
Records pictures in the size that matches the full screen of a 4:3 TV.

Notes
- Set [TV TYPE] correctly according to the TV connected for playback (p. 70).
- When you select HDV format, the image size is fixed to 16:9. You cannot record in 4:3 size.

COMPONENT
You can select the type of connection when connecting your camcorder to a TV with the component input jack.

480i
Select when connecting your camcorder to a TV with the component input jack.

➤ 1080i/480i
Select when connecting your camcorder to a TV that has the component input jack and is capable of displaying the 1080i signal.

i.LINK CONV
You can convert signals in HDV format to DV format, and output pictures in DV format from the i.LINK HDV/DV interface (i.LINK).

➤ OFF
Outputs the pictures from the i.LINK HDV/DV interface (i.LINK) in accordance with the settings in [REC FORMAT] and [VCR HDV/DV].

ON
Pictures in HDV format are converted to DV format, and pictures in DV format are output in DV format.

Notes
- For input signal via an i.LINK connection, see [VCR HDV/DV] (p. 69).
- Disconnect the i.LINK cable before setting [i.LINK CONV]. Otherwise, the connected video device may not be able to recognize the video signal from your camcorder.

TV TYPE
You need to convert the signal depending on a type of your TV when playing back the picture. The recorded pictures are played back as following illustrations.

➤ 16:9
Select to view your pictures on a 16:9 (wide) TV.
HDV/ DV (16:9) format pictures
DV (4:3) format pictures
4:3
Select to view your pictures on a 4:3 standard TV.

HDV/DV (16:9) format pictures

DV (4:3) format pictures

Notes
- This is not effective for the i.LINK output.
- When you connect your camcorder to a TV compatible with the ID-1 system or via an S VIDEO jack for playing back the tape, set [TV TYPE] to [16:9]. The TV automatically switches the aspect ratio according to the playback picture. Refer also to the manual supplied with your TV.

(MEMORY SET) menu
Settings for the “Memory Stick Duo” (QUALITY/ALL ERASE, etc.)

The default settings are marked with ▶. The indicators in parentheses appear when the items are selected.

See page 56 for details on selecting menu items.

Press the MENU button → select the (MEMORY SET) by turning the SEL/PUSH EXEC dial.

QUALITY

▶ FINE (FINE)
Records still images at the fine image quality level.

STANDARD (STD)
Records still images at the standard image quality level.

Capacity of the “Memory Stick Duo” (MB) and the number of recordable pictures

Top: [FINE] is selected for image quality. Bottom: [STANDARD] is selected for image quality

** ALL ERASE

You can delete all the pictures on a “Memory Stick Duo” without image protection, or in the selected folder.

① Select [ALL FILES] or [CURRNT FOLDER].

- **[ALL FILES]**: Deletes all the images on the “Memory Stick Duo.”
- **[CURRNT FOLDER]**: Deletes all the images in the selected folder.

② Select [YES] → [YES] by using the SEL/PUSH EXEC dial.

- [Erasing all data...] is displayed.
- [Completed] is displayed when all unprotected images are deleted.

** Notes
- Release the write protect tab on the “Memory Stick Duo” beforehand when using the “Memory Stick Duo” with the write-protect tab (p. 107).
- The folder will not be deleted even when you delete all the pictures in the folder.
- Do not do any of the following while [Erasing all data...] is displayed:
  - Operate the POWER switch/operation buttons.
  - Eject the “Memory Stick Duo.”

** FORMAT

You do not need to format the “Memory Stick Duo” since it is already formatted at the factory. If you want to format the “Memory Stick Duo,” select [YES] → [YES].

** Notes
- Do not do any of the following while [Formatting...] is displayed:
  - Operate the POWER switch/operation buttons.
  - Eject the “Memory Stick Duo.”
- Formatting erases everything on the “Memory Stick Duo” including protected image data and newly created folders.

** FILE NO.

** SERIES

Assigns file numbers in sequence even if the “Memory Stick Duo” is replaced with another one. The file number is reset when a new folder is created or the recording folder is replaced with another.

** RESET

Resets the file number to 0001 each time the “Memory Stick Duo” is changed.
When you select [YES], you can create a new folder (102MSDCF to 999MSDCF) on a “Memory Stick Duo.” When a folder is full (a maximum of 9,999 images are stored), a new folder is automatically created.

**Notes**
- You cannot delete the created folders using your camcorder. You will have to format the “Memory Stick Duo” (p. 72), or delete them using your computer.
- The number of recordable pictures on a “Memory Stick Duo” may decrease as the number of folders increases.

**REC FOLDER (Recording folder)**
You can select the folder to be used for recording by turning the SEL/PUSH EXEC dial, then press the dial.

**Tips**
- As the default setting, pictures are saved in the 101MSDCF folder.
- Once you record a picture in a folder, the same folder will be set as the default folder for playback.

**PB FOLDER (Playback folder)**
You can select the playback folder by turning the SEL/PUSH EXEC dial, then press the dial.

**CAMERA PROF. (Camera profile)**
You can save up to two kinds of camera setups in your camcorder as camera profiles. Using these saved profiles lets you quickly obtain suitable camera settings later.

**Tip**
- The items that can be saved in the camera profile are set values of the menu, the picture profiles, and the buttons. You can save these set values all in the camera profile.

**To save camera profile settings**
1. Select [SAVE] by the SEL/PUSH EXEC dial.
2. Select [NEW FILE] or an existing profile name by turning the SEL/PUSH EXEC dial.
3. Select [YES] in the check screen by turning the SEL/PUSH EXEC dial.
   The camera profile settings are saved.

**Tips**
- If you select [NEW FILE], profile name is set to [CAM1] or [CAM2].
- If you select an existing camera profile as a destination, the camera profile is overwritten.

**To change profile name**
You can change the camera profile name.
1. Select [PROFILE NAME] by the SEL/PUSH EXEC dial.
2. Select the camera profile that you want to change the name by the SEL/PUSH EXEC dial.
   [PROFILE NAME] appears.
③ Change the profile name by turning the SEL/PUSH EXEC dial.

**Tip**
- The method of inputting the name is the same as the method of setting the name of the picture profile (p. 41).

④ Select [OK] by turning the SEL/PUSH EXEC dial, then press the dial. Profile name is changed.

### To load camera profile settings
You can load the camera profile settings and use your camcorder with the settings.

1. Select [LOAD] by the SEL/PUSH EXEC dial.
2. Select the camera profile, which you want to load by the SEL/PUSH EXEC dial.
3. Select [YES] in the check screen. Your camcorder is restarted and the selected camera profile becomes effective.

### To delete camera profile settings
1. Select [DELETE] by the SEL/PUSH EXEC dial.
2. Select the camera profile you want to delete by the SEL/PUSH EXEC dial.

### ASSIGN BTN
See p. 42.

### PHOTO/EXP.FOCUS
You can select a function to assign to the PHOTO/EXPANDED FOCUS button.

#### PHOTO
Records a still image (p. 30).

#### EXP.FOCUS
The PHOTO/EXPANDED FOCUS button acts the same function as the EXPANDED FOCUS button (p. 35).

**Note**
- If [EXP.FOCUS] is selected, you cannot record still images with the main unit button. Please use the PHOTO button on the Remote Commander.

### CLOCK SET
See p. 24.

### WORLD TIME
When you use your camcorder abroad, you can adjust the clock to the local time by setting the time difference with the SEL/PUSH EXEC dial.
When you set the time difference to 0, the clock returns to the original setting.

### LANGUAGE
You can select the language to be used on the LCD screen.
- Your camcorder offers [ENG[SIMP]] (simplified English) in case that you cannot find your native tongue among the options.

### USB SELECT
You can connect the camcorder to a personal computer with a USB cable and view pictures on the “Memory Stick Duo” on the computer (p. 86). You can also connect the camcorder to a PictBridge compatible printer (p. 83) using this function.

#### Memory Stick
Select to view pictures on a “Memory Stick Duo” on the computer or to export them to the computer.

#### PictBridge PRINT
Select to connect your camcorder to a PictBridge compatible printer to print out directly (p. 83).
**PB ZOOM (Playback zoom)**

When you set [PB ZOOM] to [ON], you can enlarge movie images about 1.1 to 5 times (still images about 1.5 to 5 times). (The default setting is [OFF]). You can adjust the magnification with the zoom lever. To end the zoom, press the W side of the zoom lever.

💡 **Tip**
- To move the zoom horizontally, press the SEL/PUSH EXEC dial, then turn the dial. To move the zoom vertically, press the SEL/PUSH EXEC dial one more time, then turn the dial.

**QUICK REC (HDV1080i)**

You can slightly reduce the recording start point time when resuming recording by turning the POWER switch from OFF (CHG) to CAMERA.

- **OFF**
  It takes some time to restart recording from the state that the drum has stopped rotating, but the transition from the last recorded scene is smooth.

- **ON (REC)**
  The time shortens slightly until recording restarts from the state that the drum has stopped rotating, but the transition from the last recorded scene may not be smooth. Select this when you do not want to miss a recording chance.

💡 **Tips**
- If [QUICK REC] is set to [ON], the interval between scenes freezes for a moment (editing on your computer is recommended).
- When the camcorder is left in standby for more than about 3 minutes, your camcorder exits from standby (the drum stops rotating) to prevent tape wear and battery loss. Since the power does not turn off, you can restart recording by pressing the REC START/STOP button again.

**BEEP**

- **ON**
  Activates a melody when you start/stop recording.

- **OFF**
  Cancels the melody.

**REC LAMP (Recording lamp)**

The camera recording lamp will not light up during recording when you set this to [OFF] (the default setting is [ON]).

**REMOTE CTRL (Remote control)**

The default setting is [ON], allowing you to use the supplied Remote Commander (p. 123).

💡 **Tip**
- Set to [OFF] to prevent your camcorder from responding to a command sent by another VCR remote control unit.
Dubbing/Editing

Dubbing to VCR, DVD/HDD device, etc.

Connect your camcorder to the wall outlet using the supplied AC Adaptor for this operation (p. 18). Refer also to the instruction manuals supplied with the devices to be connected.

Connecting to external devices

The connection method and the image quality will differ depending on the VCR, DVD/HDD device and the connectors used.

*¹ Pictures recorded in the DV format are dubbed in the SD (standard definition) quality, regardless of the connection.

*² When connecting your camcorder to a monaural device, connect the yellow plug of the A/V connecting cable to the video jack on the device, and connect the white (left channel) or red (right channel) plug to the audio jack on the device.

>Note

* You cannot dub pictures using the HDMI cable.
Jacks on your camcorder

Open the jack cover and connect the cable.

Using an i.LINK cable (optional)

The dubbed format (HDV/DV) differs depending on the recording format or the format supported by the VCR/DVD device. See the table below for selecting the appropriate settings, and perform necessary menu setting.

**Note**
- Disconnect the i.LINK cable before changing these menu settings, otherwise the VCR/DVD device may not correctly identify the video signal.

**Tip**
- This camcorder has a 4-pin i.LINK terminal. Select a cable that fits the terminal on the device to be connected.

*1 Recording device compliant with the HDV1080i specification.

*2 The tape advances, but no video or sound is recorded (blank).

*3 Picture is not recognized (no recording is made).
Dubbing to VCR, DVD/HDD device, etc. (Continued)

**Notes**

- When [VCR HDV/DV] is set to [AUTO], and the signal switches between HDV and DV formats, the picture and sound are interrupted temporarily.
- When the recorder is HDR-FX7, set [VCR HDV/DV] to [AUTO] (p. 69).
- When the player and the recorder are both HDV1080i compatible devices such as HDR-FX7 and connected with the i.LINK cable, after pausing or stopping and then resuming the recording, the images will be a bit choppy or rough at that point.
- Set [DISP OUTPUT] to [LCD PANEL] (the default setting) when connecting with an A/V connecting cable (p. 68).

**When connecting with the A/V connecting cable with S VIDEO (optional)**

Connect with S VIDEO jack instead of the video plug (yellow). This connection produces pictures more faithfully. This connection produces higher quality DV format pictures. The audio will not be output when you connect with the S VIDEO cable alone.

**Dubbing to another device**

1. **Prepare your camcorder for playback.**
   - Insert the recorded cassette.
   - Slide the POWER switch to VCR.
   - Set [TV TYPE] according to the playback device (TV, etc.) (p. 70).

2. **Prepare your VCR/DVD device for recording.**
   - When dubbing to the VCR, insert a cassette for recording.
   - When dubbing to the DVD recorder, insert a DVD for recording.

If your recording device has an input selector, set it to the appropriate input (such as video input1 and video input2).

3. **Connect your VCR/DVD device to your camcorder as a recording device.**
   - See page 76 for connection details.

4. **Start playback on the camcorder, and recording on the VCR/DVD device.**
   - Refer to the operating instructions supplied with your recording device for details.

5. **When dubbing is complete, stop your camcorder and the VCR/DVD device.**

**Notes**

- The following cannot be output via the HDV/DV interface (i.LINK):
  - Indicators
  - Titles that are recorded on other camcorder
- Pictures recorded in the HDV format are not output from the HDV/DV interface (i.LINK) jack during playback pause or in any playback mode other than normal playback.
- Note the following when connecting with an i.LINK cable:
  - The recorded picture becomes rough when a picture is paused on your camcorder while recording to a VCR/DVD device.
  - Data codes (date/time/camera settings data) may not be displayed or recorded depending on the device or application.
  - You cannot record the picture and sound separately.
When dubbing to a DVD recorder from your camcorder in DV format through an i.LINK cable, you may not operate your camcorder on your DVD recorder even its instruction manual says you can. If you can set the input mode to DV on your DVD recorder and can input/output pictures, follow the steps in “Dubbing to another device.”

Tips
- To record the date/time and camera settings data when connected by the A/V connecting cable, display them on the screen.
- When you use an i.LINK cable, the video and sound signals are transmitted digitally, producing high quality pictures.
- When an i.LINK cable is connected, the format of the output signal (HDV OUT [LINK] or DV OUT [LINK]) will be indicated on the LCD screen of your camcorder.

Recording pictures from a VCR [LINK]

You can record pictures from a VCR on a tape. You can record a scene as a still image on a “Memory Stick Duo.” You can record pictures in the HDV format by connecting an HDV1080i specification compatible device. Be sure to insert a cassette or a “Memory Stick Duo” for recording in your camcorder beforehand.

You can connect your camcorder to a VCR device using an i.LINK cable. Connect your camcorder to the wall outlet using the supplied AC Adaptor for this operation (p. 18). Refer also to the instruction manuals supplied with the devices to be connected.

Notes
- You need an i.LINK cable for this operation.
- You cannot perform this operation with the A/V connecting cable.
- Your camcorder has a 4-pin i.LINK terminal. Select a cable that fits the terminal on the device to be attached.

Continued → 79
Recording movies

1 Set the POWER switch to VCR.

2 Set the input signal of your camcorder.
   Set [VCR HDV/DV] to [AUTO] when recording from an HDV format compatible device.
   Set [VCR HDV/DV] to [DV] or [AUTO] when recording from a DV format compatible device (p. 69).

3 Connect your VCR as a player to your camcorder.
   When an i.LINK cable is connected, the format of the input signal (HDV | IN or DV | IN | LINK) will be indicated on the LCD screen of your camcorder (this indicator may appear on the screen of the playback device, however, it will not be recorded).

4 Insert a cassette into the VCR.

5 Set your camcorder to recording pause.
   While pressing II (PAUSE), press both REC (record) buttons simultaneously.
6 Start playing the cassette on your VCR.
The picture played on the VCR appears on the LCD screen of your camcorder.

7 Press (PAUSE) again at the point you want to start recording.

8 Press (STOP) to stop recording.

Notes

- You cannot record TV programs from the HDV/DV interface (i.LINK).
- You can record pictures from DV devices only in the DV format.
- Note the following when connecting with an i.LINK cable:
  - The recorded picture becomes rough when a picture is paused on your camcorder while recording to a VCR.
  - You cannot record the picture and sound separately.
  - If you pause or stop the recording and restart it, the picture may not be recorded smoothly.

Tip

- When a 4:3 video signal is input, it appears with black bands on the right and left sides on the screen of your camcorder.

Recording still images

Be sure to insert a “Memory Stick Duo” for recording in your camcorder beforehand, and set [PHOTO/EXP.FOCUS] to [PHOTO] (the default setting) (p. 74).

1 Perform steps 1 to 4 in “Recording movies.”

2 Start playing the cassette.
The pictures on the VCR appear on the screen of your camcorder.

3 Press the PHOTO/EXPANDED FOCUS button at the scene you want to record.

Tip

- Movies will be fixed to image size [1.2M] when playing back in the HDV format. Movies will be fixed to image size [0.2M] (16:9) or [VGA (0.3M)] (4:3) when playing back in the DV format.
Copying movies from tape to “Memory Stick Duo” as still images

You can record still images on a “Memory Stick Duo.” Be sure to insert a recorded tape and a “Memory Stick Duo” in your camcorder, and set [PHOTO/EXP.FOCUS] to [PHOTO] (the default setting) (p. 74) beforehand.

1 Set the POWER switch to the VCR.

2 Search and record the scene you want to record.
   Press ► (Play) to play back the tape, then press the PHOTO/EXPANDED FOCUS button at the scene you want to record.

Notes
- The date and time at which the picture was recorded on the tape and the date and time at which the picture was stored on the “Memory Stick Duo” are recorded. On your camcorder, the date and time at which the picture was recorded on the tape are displayed. Camera setting data recorded on the tape cannot be stored on the “Memory Stick Duo.”
- Movies will be fixed to image size [1.2M] when playing back in the HDV format. Movies will be fixed to image size [0.2M] (16:9) or [VGA (0.3M)] (4:3) when playing back in the DV format.
- You cannot record still images while using [PB ZOOM] (p. 75).

Deleting recorded pictures from the “Memory Stick Duo”

1 Set the POWER switch to VCR.

2 Playback a picture you want to delete (p. 32).

3 Press the MEMORY/DELETE button.
   [Delete this image?] will be displayed.

4 Select [YES] by turning the SEL/PUSH EXEC dial, then press the dial.

Note
- The pictures cannot be restored once they are deleted.
Note
- Pictures cannot be deleted when a “Memory Stick Duo” with the write-protect tab is set to the write-protect position (p. 107), or when the selected picture is protected (p. 94).

Tips
- To delete images from the index screen, use the VOLUME/MEMORY button to move the mark to the images you want to and perform steps 3 and 4.
- To delete all pictures at once, select [ALL ERASE] (p. 72).

Printing recorded images (PictBridge compliant printer)

You can print out pictures using a PictBridge compliant printer without connecting the camcorder to a computer.

PictBridge
Connect the AC Adaptor to your camcorder to obtain power from the wall outlet. Insert the “Memory Stick Duo”, containing still images into your camcorder and turn on the printer.

Connecting your camcorder to the printer

1 Set the POWER switch to VCR.

2 Press the MENU button, and select (OTHERS) menu → [USB SELECT] → [PictBridge PRINT] with the SEL/PUSH EXEC dial.

3 Connect the USB cable to the (USB) jacks of your camcorder and the printer.
One of the images stored on the “Memory Stick Duo” will be displayed.

Printing recorded images (PictBridge compliant printer) (Continued)

1 Select the image you want to print with the VOLUME/MEMORY button.

2 Set the number of copies you want to print if necessary.
   If you do not want to set the number, go to step 3 (the number will be automatically set to 1).
   ① Select [SET] → [COPIES] with the SEL/PUSH EXEC dial.
   ② Select the number by turning the SEL/PUSH EXEC dial, then press the dial.
   ③ Select [RETURN] by turning the SEL/PUSH EXEC dial, then press the dial.
   The PictBridge selection screen appears again.

   Tip
   - You can set the number up to 20.

3 To print the date/time on the image, set as follows.
   If you do not want to print the date/time, go to step 4.
   ① Select [SET] → [DATE/TIME] → [DATE] or [DAY & TIME] with the SEL/PUSH EXEC dial.
   ② Select [RETURN] by turning the SEL/PUSH EXEC dial, then press the dial.
   The PictBridge selection screen appears again.

4 Select [EXEC] → [YES] with the SEL/PUSH EXEC dial.
   When printing is finished, [Printing...] disappears and the image selection screen appears again.
   Press the MENU button when printing is completed.

Notes
- We do not guarantee proper operation when a PictBridge incompatible device is connected.
- Refer also to the operating instructions for the printer to be used.
- Do not attempt the following operations when the printer is connected (7 is on the screen). The operations may not be performed properly.
  - Operate the POWER switch.
  - Disconnect the USB cable from the printer.
  - Remove the “Memory Stick Duo” from your camcorder.
- If the printer stops working, disconnect the USB cable, turn the printer off and on again and restart the operation from the beginning.
- Depending on your printer, the top, bottom or side edges may be cut. Particularly when printing a wide (16:9) image, the sides may be cut significantly.
- Some printer models may not support the date/time printing function. Refer to your printer’s operating instructions for details.
- We cannot guarantee the printing of images recorded with a device other than your camcorder.
Tip

- PictBridge is an industry standard established by the Camera & Imaging Products Association (CIPA). You can print still images without using a computer by connecting a printer directly to a digital video camera or digital still camera, regardless of model or manufacturer.
Using a Computer

Connecting to a computer

When connecting your camcorder to a computer, the following operations are available:

- Copying the still images on a “Memory Stick Duo” to the computer
  → p. 86
- Copying the movie on a tape in the HDV format to the computer
  → p. 89
- Copying the movie on a tape in the DV format to the computer
  → p. 89

About connection

There are 2 ways to connect your camcorder to a computer:

- USB cable
  To copy still images on a “Memory Stick Duo”
  → p. 86
- i.LINK cable
  To copy movies on a tape

Notes on connecting to a computer

- When using a USB cable or an i.LINK cable to connect your camcorder to a computer, make sure to connect the connector in the correct direction. If you insert the connector forcibly, it may be damaged, and cause a malfunction of your camcorder.
- You cannot do the following:
  - Copying pictures on a tape to a computer with a USB cable.
  - Copying pictures on a “Memory Stick Duo” to a computer with an i.LINK cable.
- Remove the USB cable according to the correct procedure when disconnecting it from the computer (p. 88).

Copying still images to a computer

System requirements

For Windows users

  Standard installation is required. Operation is not assured if the above OS has been upgraded.
- CPU: MMX Pentium 200MHz or faster
- Others: USB port (provided as standard).

For Macintosh users

- OS: Mac OS 9.1/9.2 or Mac OS X (v10.1/v10.2/v10.3/v10.4)
- Others: USB port (provided as standard).

Step:1 Using the USB cable

- You can do this operation with the standard driver on your computer. You do not need to install any software.
- If your computer has a Memory Stick slot, insert the “Memory Stick Duo” on which pictures are recorded into the Memory Stick Duo adaptor (optional), then insert it into the Memory Stick slot on your computer to copy still images to the computer.
- When using a “Memory Stick PRO Duo” and your computer is not compatible with it, connect your camcorder with the USB cable instead of using the Memory Stick slot on the computer.
Using a Computer

1 Turn on the computer.
   Close down all applications running on the computer.
   For Windows 2000/Windows XP
   Log on as an Administrator.

2 Insert a “Memory Stick Duo” into your camcorder.

3 Prepare the power source for your camcorder.
   Use the supplied AC Adaptor to obtain AC power (p. 18).

4 Set the POWER switch to VCR.

5 Press the MENU button.
   The menu index screen is displayed.

6 Select (OTHERS) → [USB SELECT] → [Memory Stick] with the SEL/PUSH EXEC dial (p. 74).

7 Connect the USB cable to the (USB) jacks on your camcorder and your computer.
   It may take a while until your computer recognizes your camcorder for the first time.

Step:2 Copying the pictures

For Windows users
   Double-click the [Removable Disk] icon displayed in [My Computer]. Then, drag and drop a picture in the folder onto the hard disk drive of your computer.

Continued ➔ 87
Folder containing image files recorded by other camcorders without the folder creation function (for playback only).

Folder containing image files recorded by your camcorder when no new folders have been created, only [101MSDCF] is displayed.

Folder containing movie data recorded by other camcorders without the folder creation function (for playback only)

<table>
<thead>
<tr>
<th>Folder</th>
<th>File</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>101MSDCF (up to 999MSDCF)</td>
<td>DSC0□□□□.JPG</td>
<td>Still image file</td>
</tr>
</tbody>
</table>

□□□□ are numbers between 0001 and 9999.

For Macintosh users

Double-click the drive icon, then drag and drop the desired picture file onto the hard disk of your computer.

Disconnecting the USB cable

For Windows users

If [USB CONNECTING] appears on the LCD screen, follow the procedure below to disconnect the USB cable.

1. Click the [Unplug or eject hardware] icon on the task tray.

2. Click [Safely remove USB Mass Storage Device-Drive].

3. Click [OK].

4. Disconnect the USB cable from the camcorder and computer.

If [USB CONNECTING] does not appear on the LCD screen, do only step 4.

Note

- Remove the USB cable according to the correct procedure, otherwise files in the “Memory Stick Duo” may not be updated correctly. Also, this may cause a malfunction of the “Memory Stick Duo.”

For Macintosh users

1. Close down all applications running on the computer.

2. Drag and drop the drive icon on the desktop onto the [Trash] icon.

3. Disconnect the USB cable from the camcorder and computer.
Notes
- If you are using Mac OS X, turn off the computer before disconnecting the USB cable and ejecting the “Memory Stick Duo.”
- Do not disconnect the USB cable while the access lamp is lit.
- Make sure to disconnect the USB cable before turning off your camcorder.

Recommended connection
Observe the following points when connecting to ensure the camcorder operates correctly.
- Connect the camcorder to a computer via the USB cable. Make sure no other USB devices are connected to the computer.
- If your computer has a USB keyboard and a USB mouse as standard equipment, leave them connected and connect the camcorder to an available USB jack with the USB cable.
- Operation is not guaranteed if you connect two or more USB devices to the computer.
- Operation is not guaranteed if you connect the USB cable to the USB jack on a keyboard or USB hub.
- Make sure to connect the cable to the USB jack on the computer.
- Operation is not guaranteed even for the recommended environments.

Copying movies on a tape to a computer
Connect your camcorder to the computer with an i.LINK cable.
The computer needs to have an i.LINK connector and be installed with editing software that can copy video signals. The software required depends on the format of the recorded pictures and the format for copying to the computer (HDV or DV) as shown in the table below.

<table>
<thead>
<tr>
<th>Recorded format</th>
<th>Format for copying to the computer</th>
<th>Required software</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDV</td>
<td>HDV</td>
<td>Editing software capable of copying HDV signal</td>
</tr>
</tbody>
</table>

<td>→ [HDV]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>[i.LINK CONV]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>→ [OFF]</td>
</tr>
</tbody>
</table>

Notes
- You cannot copy movies using a USB cable.
- Refer to the operating instructions of the software for the details on image copying.
- Refer to the operating instructions of the editing software for the recommended connection.
- Some editing software on the computer may not work correctly.
- You cannot change format DV to HDV.
The required menu settings vary depending on the recorded images and the format (HDV or DV) to be copied to the computer.
### Tips

- To copy HDV format images as they are without changing their format, an HDV compatible environment is required. For details, refer to your software instruction manual or contact the software manufacturer.
- To play movies by a regular DVD player, you need to create DVD video in the SD format. The DVD video is not in the HDV format.

### Notes on connecting to the computer

- Connect the i.LINK cable to the computer first, then to your camcorder. Connecting in the opposite order may cause static electricity to build up, resulting in a malfunction of your camcorder.

<table>

</tr>
</tbody>
</table>

* See page 56 for menu settings.

### Step:2 Copying the movies

Use the supplied AC Adaptor to obtain AC power (p. 18).

1. Prepare editing software (not provided).
2. Turn on your computer.
3. Insert a tape into your camcorder and set the POWER switch to VCR.
4. Set the menu of your camcorder. The menu settings vary depending on the copying image.
5. Copy images to the computer with your software.

### Notes

- If images are copied in HDV format but not recognized, your editing software may not support HDV format. Convert the images to DV format according to step 4 and copy again.
- A tape recorded in DV format cannot be copied to a computer in HDV format.

### Tips

- Check the specs, features and latest information of your software on the software manufacturer’s website.
- When images recorded in HDV format are copied to a computer, the file size is about 2GB (almost the same as a DV file) for a 10-minute
movie if the video compression format is MPEG2.

**When copying the movie in the HDV format from the computer to your camcorder**

Set [VCR HDV/DV] to [HDV] and [i.LINK CONV] to [OFF] (p. 69, 70).

💡 **Note**

- To copy an HDV format movie edited on a computer back onto a tape in HDV format is possible so long as your editing software supports copying HDV movies onto tape. For details, contact the software manufacturer.

**When copying the movie in the DV format from the computer to your camcorder**

Set [VCR HDV/DV] to [DV] (p. 69).
Troubleshooting

If you run into any problems using your camcorder, use the following table to troubleshoot the problem. If the problem persists, disconnect the power source and contact your Sony dealer.

- Power sources/LCD screen/Remote Commander — p. 92
- Cassette tapes/“Memory Stick Duo” — p. 93
- Recording — p. 94
- Playback — p. 96
- Connecting to TV — p. 98
- Dubbing/Editing/Connecting to other devices — p. 99
- Connecting to a computer — p. 100

### Power sources/LCD screen/Remote Commander

**The power does not turn on or abruptly turns off.**
- Attach a charged battery pack to the camcorder (p. 18).
- Use the AC Adaptor to connect to a wall outlet (p. 18).

**The camcorder does not operate even when the power is set to on.**
- Disconnect the AC Adaptor from the wall outlet or remove the battery pack, then reconnect it after about 1 minute.
- Press the RESET button (p. 122) using a sharp-pointed object.

**The camcorder gets warm.**
- The camcorder may get warmer while you use it. This is not a malfunction.

**The CHARGE lamp does not light while the battery pack is being charged.**
- Slide the POWER switch to OFF (CHG) (p. 18).
- Attach the battery pack to the camcorder correctly (p. 18).
- Connect the power cord to the wall outlet properly.
- The battery charge is completed (p. 18).

**The CHARGE lamp flashes while the battery pack is being charged.**
- Attach the battery pack to the camcorder correctly (p. 18). If the problem persists, disconnect the AC Adaptor from the wall outlet and contact your Sony dealer. The battery pack may be damaged.

**The remaining battery time indicator does not indicate the correct time.**
- Ambient temperature is too high or too low, or the battery pack has not been charged enough. This is not a malfunction.
- Fully charge the battery again. If the problem persists, the battery may be worn-out. Replace it with a new one (p. 18, 108).
- The indicated time may not be correct in certain circumstances. For example, when you open or close the LCD panel, it takes about 1 minute to display the correct remaining battery time.
The battery pack discharges too quickly.
• Ambient temperature is too high or low, or the battery pack has not been charged enough. This is not a malfunction.
• Fully charge the battery again. If the problem persists, the battery may be worn-out. Replace it with a new one (p. 18, 108).

The picture remains on the LCD screen.
• This occurs if you disconnect the DC plug or remove the battery pack without turning off the power first. This is not a malfunction.

The picture in the viewfinder is not clear.
• Move the viewfinder lens adjustment lever until the picture appears clearly (p. 22).

The picture in the viewfinder has disappeared.
• If you change [VF POWERMODE] to [AUTO], the finder light remains off while the LCD panel is open (p. 67).

The supplied Remote Commander does not function.
• Set [REMOTE CTRL] to [ON] (p. 75).
• Remove any obstructions between the Remote Commander and the remote sensor.
• Keep strong light sources, such as sunlight or overhead lighting, away from the remote sensor, otherwise the Remote Commander may not function properly.
• Insert a fresh battery in the compartment with its +/- terminals matching those of the compartment (p. 123).

Another VCR malfunctions when you use the supplied Remote Commander.
• Select a commander mode other than VTR 2 for your VCR.
• Cover the sensor of your VCR with black paper.

Cassette tapes/“Memory Stick Duo”

The cassette cannot be ejected from the compartment.
• Make sure the power source (battery pack or AC Adaptor) is connected correctly (p. 18).
• Moisture condensation has occurred inside the camcorder (p. 111).

The Cassette Memory indicator or title display does not appear while using a cassette with Cassette Memory.
• This camcorder does not support Cassette Memory, so the indicator does not appear.

The remaining tape indicator is not displayed.
• Set [REMAINING] to [ON] to always display the remaining tape indicator (p. 68).
The cassette is noisier during rewinding or fast-forwarding.

- When using the AC Adaptor, rewind/fast forward speed increases (compared with battery operation) and therefore increases noise. This is not a malfunction.

You cannot delete pictures or format the “Memory Stick Duo.”

- Release the lock on the write-protect tab of the “Memory Stick Duo” if there is one (p. 107).
- The pictures are protected. Release the protect function on your computer, etc.

Recording

The recording does not start when you press the REC START/STOP button.

- Slide the POWER switch to CAMERA (p. 28).
- The tape has reached the end. Rewind it, or insert a new cassette.
- Set the write-protect tab of the cassette to REC or insert a new cassette (p. 105).
- The tape is stuck to the drum due to moisture condensation. Remove the cassette and leave your camcorder for at least 1 hour, then re-insert the cassette (p. 111).

The handle zoom does not work.

- Set the handle zoom switch to H or L (p. 33).

You cannot record on the “Memory Stick Duo.”

- Release the lock on the write-protect tab of the “Memory Stick Duo” if there is one (p. 107).
- The “Memory Stick Duo” is full. Delete unnecessary pictures recorded on the “Memory Stick Duo” (p. 82).
- Format the “Memory Stick Duo” on your camcorder or insert another “Memory Stick Duo” (p. 72).
- You cannot record still images on the “Memory Stick Duo” with:
  - While executing [FADER]
  - [SMTH SLW REC]
  - When the shutter speed is set to slower than 1/60
  - While checking/executing shot transition
- Set [PHOTO/EXP.FOCUS] to [PHOTO](p. 74).

You cannot record a smooth transition on a tape from the last recorded scene to the next.

- Perform End search (p. 44).
- Do not remove the cassette (the picture will be recorded continuously without a break even when you turn the power off).
- Do not record pictures in the HDV and DV formats on the same tape.
- Do not record pictures in SP mode and LP mode on the same tape.
- Avoid stopping then recording a movie in the LP mode.
- When [QUICK REC] is set to [ON], you cannot record a smooth transition (p. 75).
Troubleshooting

The shutter sound is not heard when you record a still image.
- Set [BEEP] to [ON] (p. 75).
- There is no shutter sound while during movie shooting.

End search does not work.
- Do not eject the cassette after recording (p. 44).
- There is nothing recorded on the cassette.
- There is a blank section between recorded sections of the tape. This is not a malfunction.

Auto focus does not function.
- Press the FOCUS button to set to auto focus (p. 34).
- If auto focus is difficult to use, focus manually (p. 34).

Menu items are grayed out or does not work.
- You cannot select gray out display items in the current recording/playback situation.
- There are some functions you cannot activate simultaneously. The following list shows examples of unworkable combinations of functions and menu items.

<table>
<thead>
<tr>
<th>Cannot use</th>
<th>Situation</th>
</tr>
</thead>
<tbody>
<tr>
<td>[BACK LIGHT]</td>
<td>[EXPOSURE] is set to manual. Two or more of iris/gain/shutter speed are set manually. Iris, gain, and shutter speed are all set manually.</td>

<td>Displaying [COLOR BAR]. During [SHOT TRANS].</td>
</tr>
</tbody>
</table>

Shutter speed, gain, white balance or iris cannot be adjusted manually.
- Set the AUTO LOCK switch to the center position to release the auto lock mode.

Tiny spots in white, red, blue, or green appear on the screen.
- This phenomenon appears when using a slow shutter speed (p. 37). This is not a malfunction.
The subjects passing by the frame very fast appear crooked.

• This is called the focal plane phenomenon. This is not a malfunction. Because of the way that the image device (CMOS sensor) reads out image signals, the subjects passing by the frame rapidly might appear crooked depending on the recording conditions.

The screen picture is bright, and the subject does not appear on the screen.

• Cancel the BACK LIGHT function (p. 62).

The screen picture is dark, and the subject does not appear on the screen.

• Press and hold the DISPLAY/BATT INFO button for a few seconds to turn on the backlight (p. 22).

The picture appears too bright, or horizontal bands or changes in color occurs.

• This occurs when recording pictures under a fluorescent lamp, sodium lamp, or mercury lamp. This is not a malfunction.

Black bands appear when you record a TV screen or computer screen.

• This can be improved by changing the shutter speed (p. 37).

Fine patterns flicker, diagonal lines look jagged.

• Adjust [SHARPNESS] to [0] side (p. 40).

Playback

If you are playing back pictures stored on a “Memory Stick Duo,” refer also to the Cassette tapes/“Memory Stick Duo” section (p. 93).

You cannot play back tape.

• Slide the POWER switch to turn on the VCR.
• Rewind the tape (p. 31).

Image data stored on a “Memory Stick Duo” cannot be played back correctly.

• Image data cannot be played back if you have modified file names or folders, or have edited the data on a computer (In this case, the file name flashes). This is not a malfunction (p. 108).
• Pictures recorded on other devices may not be played back correctly. This is not a malfunction.

The data file name is displayed incorrectly, or flashing.

• The file is damaged.
• The file format is not supported on your camcorder (p. 106).
• Only the file name is displayed if the directory structure does not conform to the universal standard.
Horizontal lines appear on the picture. The displayed pictures are not clear or do not appear.

- Video head is dirty. Clean the head using the cleaning cassette (optional) (p. 112).

You cannot hear the sound recorded with 4CH MIC REC on another camcorder.

- Set [DV AUDIO MIX] (p. 64).

No sound or only a low sound is heard.

- Turn up the volume (p. 32).
- Set [MULTI-SOUND] to [STEREO] (p. 64).
- Set [DV AUDIO MIX] (p. 64).
- Pictures recorded using [SMTH SLW REC] do not have sounds.

The picture or sound breaks off.

- The tape was recorded in both of the HDV and DV formats. This is not a malfunction.

The movies freeze for a while, or the sound breaks off.

- This occurs if the tape or video head is dirty (p. 112).
- Use the Sony mini DV cassette.

“---” is displayed on the screen.

- The tape you are playing was recorded without setting the date and time.
- A blank section on the tape is being played.
- The data code on a tape with a scratch or noise cannot be read.

Noises appear and [PAL] or [50i] is displayed on the screen.

- The tape was recorded in a TV color system other than that of your camcorder (NTSC). This is not a malfunction.

Date Search does not work correctly.

- Be sure to record more than 2 minutes after the date changed. If one day’s recording is too short, your camcorder may not accurately find the point where the recording date changes.
- There is a blank section between recorded sections of the tape. This is not a malfunction.

No picture appears during End search or Rec review.

- The tape was recorded in both HDV and DV formats. This is not a malfunction.
New sound added to a recorded tape on another camcorder is not heard.

- Adjust [DV AUDIO MIX] from [ST1] (original sound) side until the sound is heard appropriately (p. 64).

4ch-12b appears on the LCD screen.

- This appears when you play back a tape recorded on other recording devices using a 4ch microphone (4CH MIC REC). This camcorder does not comply with the 4ch microphone recording standard.

Connecting to TV

You cannot view the picture on the TV connected with the i.LINK cable.

- You cannot view the picture in the HD (high definition) quality on the TV if an i.LINK jack of the TV is not compatible with the HDV1080i specification (p. 51). Refer to the instruction manuals supplied with your TV.
- Down convert the pictures recorded in HDV format and play back in DV format (SD image quality) (p. 70).
- Play back pictures using another connecting cable (p. 51).

You cannot hear the sound on the TV connected with the S VIDEO plug (S VIDEO channel) or component video plug.

- If you are using an S VIDEO plug or component video plug, make sure the red and white plugs of the A/V connecting cable are also connected (p. 51).

You cannot view the picture or hear the sound on the TV connected with the component video cable.

- Set [COMPONENT] according to the requirements of the connected device (p. 70).
- When you are using the component video cable, make sure the red and white plugs of the A/V connecting cable are connected (p. 51).

You cannot view the picture or hear the sound on the TV connected with the HDMI cable.

- Pictures in the HDV format are not output from the HDMI OUT jack, if copyright protection signals are recorded in the pictures.
- DV format pictures input to the camcorder via i.LINK cable (p. 76) cannot be output.
- This occurs if you record on a tape in both HDV and DV formats. Disconnect and connect the HDMI cable, or slide the POWER switch to turn on your camcorder again.

The picture appears distorted on the 4:3 TV.

- This happens when viewing a picture recorded in the 16:9 (wide) mode on a 4:3 TV. Set [TV TYPE] and play back the picture.
Troubleshooting

Black zone appears at top and bottom of a 4:3 TV screen.
- This happens when viewing a picture recorded in the 16:9 (wide) mode on a 4:3 TV. This is not a malfunction.

### Dubbing/Editing/Connecting to other devices

#### Pictures from connected devices cannot be zoomed.
- You cannot zoom pictures from connected devices on your camcorder (p. 33).

#### Time code and other information appear on the display of the connected device.
- Set [DISP OUTPUT] to [LCD PANEL] while connected with an A/V connecting cable (p. 68).

#### You cannot dub correctly using the A/V connecting cable.
- The A/V connecting cable is not connected properly. Make sure that the A/V connecting cable is connected to the input jack of the other device for dubbing a picture from your camcorder.

#### When connected using an i.LINK cable, no picture appears on the monitor screen during dubbing.
- Set [VCR HDV/DV] according to the requirements of the connected device (p. 69).

#### You cannot add sound to the recorded tape.
- You cannot add sound to the recorded tape on this unit.

#### You cannot dub correctly using the HDMI cable.
- You cannot dub pictures using the HDMI cable.

#### Still pictures cannot be dubbed from a tape to a “Memory Stick Duo.”
- You cannot capture pictures at all or good-quality pictures from the tape that has been used repeatedly for recording.

#### When you copy a movie shot in wide (16:9) format using an i.LINK cable, the screen stretches vertically.
- You cannot output the aspect ratio setting using an i.LINK cable. Set the aspect ratio of the TV instead.
- Connect using an AV cable instead.

Continued ➔ 99
Connecting to a computer

The computer does not recognize your camcorder. [USB] [i.LINK]

- Disconnect the cable from the computer and camcorder, then connect it again securely.
- Disconnect USB devices other than the keyboard, the mouse, and the camcorder from the \( \frac{1}{2} \) (USB) jack on the computer.
- Disconnect the cable from the computer and camcorder, restart the computer, then connect them again correctly.

You cannot view or copy the video recorded on a tape on the computer. [i.LINK]

- Disconnect the cable from the computer, then connect it again.
- Connect the i.LINK cable because you cannot copy video with the USB cable.

You cannot view or copy still images recorded on a “Memory Stick Duo” on the computer screen. [USB]

- Insert a “Memory Stick Duo” in the correct direction, then push it all the way in.
- You cannot use an i.LINK cable. Connect the camcorder and the computer using the USB cable.
- Slide the POWER switch to turn on the VCR and set [USB SELECT] to [Memory Stick] (p. 74).
- The computer does not recognize the “Memory Stick Duo” during camcorder operations such as tape playback or editing. Finish any camcorder operations and then connect the camcorder to the computer again.
- Disconnect the USB device other than the keyboard, the mouse, and the camcorder from the \( \frac{1}{2} \) (USB) jack on the computer.

Your computer freezes.

- Set [VCR HDV/DV] correctly according to the connected device (p. 69).
- Disconnect the cable from your computer and camcorder. Reboot your computer, and connect your computer and camcorder following the steps in the correct order (p. 88).
Warning indicators and messages

Self-diagnosis display/Warning indicators

If indicators appear on the LCD screen or in the viewfinder, check the following. Some symptoms you can fix by yourself. If the problem persists even after you have tried a couple of times, contact your Sony dealer or local authorized Sony service facility.

C: (or E:) □□:□□ (Self-diagnosis display)

C:04:□□
- The battery pack is not an “InfoLITHIUM” battery pack. Use an “InfoLITHIUM” battery pack (p. 108).
- Connect the DC plug of the AC Adaptor to the DC IN jack of your camcorder securely (p. 18).

C:21:□□
- Moisture condensation has occurred. Remove the cassette and leave your camcorder for at least 1 hour, then re-insert the cassette (p. 111).

C:22:□□
- Clean the head using a cleaning cassette (optional) (p. 112).

C:31:□□ / C:32:□□
- Symptoms that are not described above have occurred. Remove and insert the cassette, then operate your camcorder again. Do not perform this procedure if moisture condensation has occurred (p. 111).
- Remove the power source. Reconnect it and operate your camcorder again.
- Change the cassette. Press the RESET button (p. 122), and operate your camcorder again.

E:61:□□ / E:62:□□ / E:91:□□
- Contact your Sony dealer or local authorized Sony service facility. Inform them of the 5-digit code, which starts from “E.”

101-1001 (Warning indicator pertaining to files)
- The file is damaged.
- The file is unreadable (p. 108).

Battery level warning)
- The battery pack is nearly used up.
- Depending on the operating, environment, or battery conditions, may flash, even if there are approximately 5 to 10 minutes remaining.

Moisture condensation warning)*
- Eject the cassette, remove the power source, and then leave it for about 1 hour with the cassette lid open (p. 111).

Warning indicator pertaining to “Memory Stick Duo”)
- A “Memory Stick Duo” is not inserted (p. 26).

Warning indicators pertaining to “Memory Stick Duo” formatting)*
- The “Memory Stick Duo” is damaged.
- The “Memory Stick Duo” is not formatted correctly (p. 72, 106).

Warning indicators pertaining to unsupported “Memory Stick Duo”)
- A “Memory Stick Duo” that cannot be used in your camcorder is inserted (p. 106).

Warning indicators pertaining to the tape

Slow flashing:
- There is less than 5 minutes remaining on the tape.
- No cassette is inserted.*
- The write-protect tab on the cassette is set to lock (p. 105).*

Continued ➔ 101
Fast flashing:
• The tape has run out.*

△ (Eject cassette warning)*

Slow flashing:
• The write-protect tab on the cassette is set to lock (p. 105).

Fast flashing:
• Moisture condensation has occurred (p. 111).
• The self-diagnosis display code is displayed (p. 101).

□ → (Warning indicator pertaining to the write-protect of the “Memory Stick Duo”)*
• The write-protect tab on the “Memory Stick Duo” is set to lock (p. 107).

* You hear a melody when the warning indicators appear on the screen (p. 101).

Description of warning messages
If messages appear on the screen, follow the instructions.

■ Battery/Power

Use the “InfoLITHIUM” battery pack (p. 108)

■ Moisture condensation

💧 Moisture condensation. Eject the cassette (p. 111)

💧 Moisture condensation. Turn off for 1H. (p. 111)

■ Cassette/Tape

△ Reinsert the cassette. (p. 26)
• Check if the cassette is damaged.

⚠ The tape is locked - check the tab. (p. 105)

Cannot record due to copyright protection. (p. 105)

■ “Memory Stick Duo”

☑ Incompatible type of Memory Stick.
• A type of “Memory Stick Duo” incompatible with your camcorder is inserted (p. 106).

Protected file. Cannot delete.
• Cancel file protection using your computer.

☑ Reinsert the Memory Stick. (p. 26, 106)
• Reinsert the “Memory Stick Duo” a few times. If even then the indicator flashes, the “Memory Stick Duo” might be damaged. Try with another “Memory Stick Duo.”

☑ This Memory Stick is not formatted correctly.
• Check the format, then format the “Memory Stick Duo” as necessary (p. 72, 106).

Memory Stick folders are full.
• You cannot create folders exceeding 999MSDCF. You cannot delete created folders using your camcorder.
• You will have to format the “Memory Stick Duo” (p. 72), or delete them using your computer.
Cannot record still images on Memory Stick.
- You cannot record still images in the following cases:
  - When the shutter speed is 1/60 or less
  - While using [FADER]
  - While using [SMTH SLW REC]
  - While checking or executing shot transition

**PictBridge compliant printer**

Check the connected device.
- Switch off the printer and switch it on again, then disconnect the USB cable and reconnect it.

Error. Cancel the task.
- Switch off the printer and switch it on again, then disconnect the USB cable and reconnect it.

**Others**

Change to correct tape format.
- The pictures cannot be played back because of an incompatible format.

No output image in “VCR HDV/DV”.
Change format.
- Stop playback or signal input, or change [VCR HDV/DV] setting (p. 69).

⚠️️ Dirty video head. Use a cleaning cassette. (p. 112)
Using your camcorder abroad

Power supply

You can use your camcorder in any country/region using the AC Adaptor supplied with your camcorder within the AC 100 V to 240 V, 50/60 Hz range. Use a commercially available AC plug adaptor [a], if necessary, depending on the design of the wall outlet [b].

On TV color systems

Your camcorder is NTSC system, so its picture can only be viewed on an NTSC system TV with an AUDIO/VIDEO input jack.

Viewing HDV format pictures recorded in HDV format

You need an HDV1080i compatible TV (or monitor) with a component jack and AUDIO/VIDEO input jack. A component video cable and A/V connecting cable are also needed.

Viewing DV format pictures recorded in DV format

You need a TV with the AUDIO/VIDEO input jack. A connecting cable is also needed.

Simple setting of the clock by time difference

When you are abroad, you can easily adjust the clock to the local time by setting the time difference. Select [WORLD TIME], then set the time difference (p. 74).

<table>
<thead>
<tr>
<th>System</th>
<th>Used in</th>
</tr>
</thead>
<tbody>
<tr>
<td>NTSC</td>
<td>Bahama Islands, Bolivia, Canada, Central America, Chile, Colombia, Ecuador, Guyana, Jamaica, Japan, Korea, Mexico, Peru, Surinam, Taiwan, the Philippines, the U.S.A., Venezuela, etc.</td>
</tr>
<tr>
<td>PAL</td>
<td>Australia, Austria, Belgium, China, Czech Republic, Denmark, Finland, Germany, Holland, Hong Kong, Hungary, Italy, Kuwait, Malaysia, New Zealand, Norway, Poland, Portugal, Singapore, Slovak Republic, Spain, Sweden, Switzerland, Thailand, United Kingdom, etc.</td>
</tr>

<tr>
<td>PAL - N</td>
<td>Argentina, Paraguay, Uruguay.</td>
</tr>
<tr>
<td>SECAM</td>
<td>Bulgaria, France, Guiana, Iran, Iraq, Monaco, Russia, Ukraine, etc.</td>
</tr>
</tbody>
</table>
Your camcorder is capable of recording in both HDV and DV formats. You can use mini DV format cassettes only. Use a cassette with the miniDV mark. Your camcorder is not compatible with cassettes with Cassette Memory.

What is the HDV format?
The HDV format is a video format developed to record and play back digital high definition (HD) video signals on a DV cassette. Your camcorder adopts the Interlace mode with 1,080 effective scan lines of screen ruling (1080i, number of pixels 1,440 × 1,080 dots). The video bit rate for recording is about 25 Mbps. i.LINK is adopted for the digital interface, enabling a digital connection with an HDV compatible TV or computer.

- HDV signals are compressed in MPEG2 format, which is adopted in BS (broadcast satellite) digital, terrestrial digital HDTV broadcastings, in Blu-ray Disc recorders, etc.

Playback
Your camcorder can play back pictures in both the DV format and HDV 1080i specification. Your camcorder can play back pictures recorded in the HDV 720/30p format, but cannot output it from the HDV/DV interface (i.LINK).

To prevent a blank section from being created on the tape
Go to the end of the recorded section using [END SEARCH] (p. 44) before you begin the next recording when you have played back the tape.

Copyright signal
- When you play back
If the cassette you play back on your camcorder contains copyright signals, you cannot copy it to a tape in another video camera connected to your camcorder.

- When you record
You cannot record software on your camcorder that contains copyright control signals for copyright protection of software. [Cannot record due to copyright protection.] appears on the LCD screen, or on the viewfinder if you try to record such software. Your camcorder does not record copyright control signals on the tape when it records.

Notes on use
- When not using your camcorder for a long time
Remove the cassette and store it.

- To prevent accidental erasure
Slide the write-protect tab on the cassette to set it to SAVE.

REC: The cassette can be recorded.
SAVE: The cassette cannot be recorded (write-protected).
**HDV format and recording/playback (Continued)**

- **When labeling the cassette**
  Be sure to place the label only on the locations shown in the following illustration so as not to cause a malfunction of your camcorder.

![Labeling position]

- **After using the cassette**
  Rewind the tape to the beginning to avoid distortion of the picture or the sound. The cassette should then be put in its case, and stored in an upright position.

- **When cleaning the gold-plated connector**
  Generally, clean the gold-plated connector on a cassette with a cotton-wool swab after every 10 times it has been ejected.
  If the gold-plated connector on the cassette is dirty or dusty, the remaining tape indicator may not show correctly.

![Gold-plated connector]

**About the “Memory Stick”**

A “Memory Stick” is a compact, portable IC recording medium with a large data capacity.
You can use only a “Memory Stick Duo,” which is about the half size of a standard “Memory Stick” in your camcorder.
However, appearance on the list below does not guarantee the operation of all types of “Memory Stick Duo” in your camcorder.

<table>
<thead>
<tr>
<th>Types of “Memory Stick”</th>
<th>Recording/Playback</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Memory Stick” (without MagicGate)</td>
<td>–</td>
</tr>
<tr>
<td>“Memory Stick Duo”*1 (without MagicGate)</td>
<td>○</td>
</tr>
<tr>
<td>“MagicGate Memory Stick”</td>
<td>–</td>
</tr>
<tr>
<td>“Memory Stick Duo”*1 (with MagicGate)</td>
<td>○<em>2</em>3</td>
</tr>
<tr>
<td>“MagicGate Memory Stick Duo”*1</td>
<td>○*3</td>
</tr>
<tr>
<td>“Memory Stick PRO”</td>
<td>–</td>
</tr>
<tr>
<td>“Memory Stick PRO Duo”*1</td>
<td>○<em>2</em>3</td>
</tr>
</tbody>
</table>

*1 A “Memory Stick Duo” is about half the size of a standard “Memory Stick.”
*2 The types of “Memory Stick” that support high speed data transfer. The speed of data transfer varies depending on the device to be used.
*3 “MagicGate” is a copyright protection technology that records and transfers the contents in an encrypted format. Note that data that uses “MagicGate” technology cannot be recorded or played on your camcorder.

**On Sony HDV1080i compliant TVs**

An HDV format compatible TV with the component input jack is required to view playback pictures recorded in the HDV format.

- **Still image format**: Your camcorder compresses and records image data in the JPEG (Joint Photographic Experts Group) format. The file extension is “.JPG.”
- **File names of still images**:
  - 101-0001: This file name appears on the screen of your camcorder.
  - DSC00001.JPG: This file name appears on the display of a computer.
- A “Memory Stick Duo” formatted by a computer (Windows OS/Mac OS) does not have guaranteed compatibility with your camcorder.
• Data read/write speed may vary depending on the combination of the “Memory Stick” and “Memory Stick” compliant product you use.

On a “Memory Stick Duo” with a write-protect tab
You can prevent accidental erasure of images when you slide the write-protect tab on the “Memory Stick Duo” with a small tapered object, to the write-protect position.

Notes on use
Damaged or lost image data will not be compensated for, and may occur in the following cases:
• If you eject the “Memory Stick Duo,” turn the power off on your camcorder, or remove the battery pack for replacement while your camcorder is reading or writing image files on the “Memory Stick Duo” (while the access lamp is lit or flashing).
• If you use the “Memory Stick Duo” near magnets or magnetic fields.

It is recommended you make a back-up of important data on the hard disk of a computer.

On handling a “Memory Stick”
Keep the following in mind when handling a “Memory Stick Duo.”
• Be careful not to apply excessive force when writing on a memo area on a “Memory Stick Duo.”
• Do not attach a label or the like on a “Memory Stick Duo” or a Memory Stick Duo adaptor.
• When you carry or store a “Memory Stick Duo,” put it in its case.
• Do not touch, or allow metallic objects to come into contact with the terminals.
• Do not bend, drop or apply strong force to the “Memory Stick Duo.”
• Do not disassemble or modify the “Memory Stick Duo.”
• Do not let the “Memory Stick Duo” get wet.
• Be careful to keep “Memory Stick Duo” media out of the reach of small children. There is danger that a child might swallow it.

On a “Memory Stick Duo” slot
Do not insert anything other than a “Memory Stick Duo” into the “Memory Stick Duo” slot. Doing so may cause a malfunction.

On a location for use
Do not use or keep the “Memory Stick Duo” in the following locations.
• Places subject to extremely high temperature, such as a car parked outside in the summer.
• Places under direct sunlight.
• Places with extremely high humidity or subject to corrosive gases.

On the Memory Stick Duo adaptor
After inserting a “Memory Stick Duo” into the Memory Stick Duo adaptor, you can use it with a standard “Memory Stick” compliant device.
• When using a “Memory Stick Duo” with a “Memory Stick” compliant device, be sure to insert the “Memory Stick Duo” into a Memory Stick Duo adaptor.
• When inserting a “Memory Stick Duo” into a Memory Stick Duo adaptor, make sure the “Memory Stick Duo” is inserted facing in the correct direction, then insert it all the way in. Note that improper use may cause a malfunction. Also, if you force the “Memory Stick Duo” into the Memory Stick Duo adaptor in the wrong direction, it may be damaged.
• Do not insert a Memory Stick Duo adaptor without a “Memory Stick Duo” attached. Doing so may result in malfunctions of the unit.

On a “Memory Stick PRO Duo”
• The maximum memory capacity of a “Memory Stick PRO Duo” that can be used on your camcorder is 4 GB.
About the “Memory Stick” (Continued)

On image data compatibility

- Image data files recorded on a “Memory Stick Duo” by your camcorder conform to the “Design rule for Camera File system” universal standard established by the JEITA (Japan Electronics and Information Technology Industries Association).
- On your camcorder, you cannot play back still images recorded on other devices (DCR-TRV900 or DSC-D700/D770) that do not conform to the universal standard (these models are not sold in some regions).
- If you cannot use a “Memory Stick Duo” that has been used with another device, format it with your camcorder (p. 72). Note that formatting erases all information on the “Memory Stick Duo.”
- You may not be able to play back images with your camcorder:
  - When playing back image data modified on your computer.
  - When playing back image data recorded with other devices.

About the “InfoLITHIUM” battery pack

This unit is compatible with an “InfoLITHIUM” battery pack (L series). Your camcorder operates only with an “InfoLITHIUM” battery pack. “InfoLITHIUM” L series battery packs have the \( \text{\textcopyright} \) \( \text{\textregistered} \) mark.

What is an “InfoLITHIUM” battery pack?

An “InfoLITHIUM” battery pack is a lithium-ion battery pack that has functions for communicating information related to operating conditions between your camcorder and an optional AC Adaptor/charger. The “InfoLITHIUM” battery pack calculates the power consumption according to the operating conditions of your camcorder, and displays the remaining battery time in minutes. With an AC Adaptor/charger, the remaining battery time and charging time appear.

To charge the battery pack

- Be sure to charge the battery pack before you start using your camcorder.
- We recommend charging the battery pack in an ambient temperature of between 10 °C to 30 °C (50 °F to 86 °F) until the CHARGE lamp turns off. If you charge the battery pack outside of this temperature range, you may not be able to charge it efficiently.
- After charging is complete, disconnect the cable from the DC IN jack on your camcorder or remove the battery pack.

To use the battery pack effectively

- Battery pack performance decreases when the surrounding temperature is 10 °C (50 °F) or below, and the length of time you can use the battery pack becomes shorter. In that case, do one of the following to use the battery pack for a longer time.
  - Put the battery pack in a pocket to warm it up, and insert it in your camcorder right before you start taking shots.
– Use a large capacity battery pack: NP-F770/F970 (optional).

- Frequent use of the LCD screen or a frequent playback, fast forward or rewind operation wears out the battery pack faster. We recommend using a large capacity battery pack: NP-F770/F970.

- Be sure to set the POWER switch to OFF (CHG) when not recording or playing back on your camcorder. The battery pack is also consumed when your camcorder is in recording standby or playback pause.

- Have spare battery packs ready for two or three times the expected recording time, and make trial recordings before making the actual recording.

- Do not expose the battery pack to water. The battery pack is not water resistant.

**About the remaining battery time indicator**

- When the power goes off even though the remaining battery time indicator indicates that the battery pack has enough power to operate, charge the battery pack fully again. Remaining battery time will be indicated correctly. Note, however, that the battery indication will not be restored if it is used in high temperatures for a long time, or if left in a fully charged state, or when the battery pack is frequently used. Use the remaining battery time indication as a rough guide only.

- The $\bigcirc$ mark that indicates low battery flashes even if there are still 5 to 10 minutes of battery time remaining, depending on the operating conditions or ambient temperature.

**About storage of the battery pack**

- If the battery pack is not used for a long time, fully charge the battery pack and use it up on your camcorder once a year to maintain proper function. To store the battery pack, remove it from your camcorder and put it in a dry, cool place.

- To discharge the battery pack on your camcorder completely, leave your camcorder in tape recording standby until the power goes off (p. 21).

**About battery life**

- Battery capacity decreases over time and through repeated use. If decreased usage time between charges becomes significant, it is probably time to replace it with a new one.

- Each battery’s life is governed by storage, operating and environmental conditions.
About i.LINK

The HDV/DV interface on this unit is an i.LINK-compliant interface. This section describes the i.LINK standard and its features.

What is i.LINK?

i.LINK is a digital serial interface for transferring digital video, digital audio, and other data to other i.LINK-compatible devices. You can also control other devices using the i.LINK.

i.LINK-compatible devices can be connected using an i.LINK cable. Possible applications are operations and data transactions with various digital AV devices.

When two or more i.LINK-compatible devices are daisy-chained with the unit, operation becomes possible from any device in the chain. Note that operation method may vary, or data transactions may not be possible, depending on specifications and characteristics of the connected devices.

Notes

• Normally, only one device can be connected to this unit with an i.LINK cable. When connecting this unit to an HDV/DV compatible device having two or more HDV/DV interfaces, refer to the operating instructions of the device to be connected.

• i.LINK is a more familiar term for the IEEE 1394 data transport bus proposed by Sony, and is a trademark approved by many corporations.

• IEEE 1394 is an international standard standardized by the Institute of Electrical and Electronics Engineers.

About the i.LINK Baud rate

i.LINK’s maximum baud rate varies according to the device. There are 3 types.

S100 (approx. 100Mbps*)
S200 (approx. 200Mbps)
S400 (approx. 400Mbps)

The baud rate is listed under “Specifications” in the operating instructions of each piece of equipment. It is also indicated near the i.LINK interface on some devices.

The baud rate may differ from the indicated value when the unit is connected to a device with a different maximum baud rate.

What is Mbps?

Mbps stands for “megabits per second,” or the amount of data that can be sent or received in one second. For example, a baud rate of 100 Mbps means that 100 megabits of data can be sent in one second.

To use i.LINK functions on this unit

For details on how to dub when this unit is connected to other video devices having an i.LINK interface, see page 78.

This unit can also be connected to other i.LINK-compatible devices made by Sony (for example, a VAIO series personal computer) as well as to video devices. Some i.LINK compatible video devices, such as Digital Televisions, DVD, MICROMV or HDV recorders/players are not compatible with this unit. Before connecting to other devices, be sure to confirm whether the device is compatible with an HDV/DV device or not. For details on precautions and compatible application software, refer also to the operating instructions for the device to be connected.

Note

• When connecting a device with an i.LINK terminal to your camcorder via an i.LINK cable, switch off the device and unplug it from the power socket before plugging in or unplugging the i.LINK cable.

About the required i.LINK cable

Use the Sony i.LINK 4-pin-to-4-pin cable (during HDV/DV dubbing).
Maintenance and precautions

On use and care

• Do not use or store the camcorder and accessories in the following locations.
  – Anywhere extremely hot or cold. Never leave them exposed to temperatures above 60 °C (140 °F), such as under direct sunlight, near heaters or in a car parked in the sun. They may malfunction or become deformed.
  – Near strong magnetic fields or mechanical vibration. The camcorder may malfunction.
  – Near strong radio waves or radiation. The camcorder may not be able to record properly.
  – Near AM receivers and video equipment. Noise may occur.
  – On a sandy beach or anywhere dusty. If sand or dust gets in your camcorder, it may malfunction. Sometimes this malfunction cannot be repaired.
  – Near windows or outdoors, where the LCD screen, the viewfinder, or the lens may be exposed to direct sunlight. This damages the inside of the viewfinder or the LCD screen.
  – Anywhere very humid.
• Operate your camcorder on DC 7.2 V (battery pack) or DC 8.4 V (AC Adaptor).
• For DC or AC operation, use the accessories recommended in these operating instructions.
• Do not let your camcorder get wet, for example, from rain or sea water. If your camcorder gets wet, it may malfunction. Sometimes this malfunction cannot be repaired.
• If any solid object or liquid gets inside the casing, unplug your camcorder and have it checked by a Sony dealer before operating it any further.
• Avoid rough handling, disassembling, modifying, physical shock, or impact such as hammering, dropping or stepping on the product. Be particularly careful of the lens.
• Keep the POWER switch setting to OFF (CHG) when you are not using your camcorder.
• Do not wrap your camcorder with a towel, for example, and operate it. Doing so might cause heat to build up inside.
• When disconnecting the power cord, pull it by the plug and not the cord.
• Do not damage the power cord such as by placing anything heavy on it.
• Keep metal contacts clean.
• Keep the Remote Commander and button-type battery out of children’s reach. If the battery is accidentally swallowed, consult a doctor immediately.
• If the battery electrolytic liquid has leaked,
  – consult your local authorized Sony service facility.
  – wash off any liquid that may have contacted your skin.
  – if any liquid gets in your eyes, wash with plenty of water and consult a doctor.

When not using your camcorder for a long time

• Periodically turn on the camcorder and play a cassette for about 3 minutes.
• Use up the battery pack completely before storing it.

Moisture condensation

If your camcorder is brought directly from a cold place to a warm place, moisture may condense inside your camcorder, on the surface of the tape, or on the lens. In this state, the tape may stick to the head drum and be damaged or your camcorder may not operate correctly. If there is moisture inside your camcorder, [Moisture condensation. Eject the cassette] or [Moisture condensation. Turn off for 1H.] appears. The indicator will not appear when the moisture condenses on the lens.

If moisture condensation has occurred

None of the functions except cassette ejection will work. Eject the cassette, turn off your camcorder, and leave it for about one hour with the cassette lid open. Your camcorder can be used again when both of the following conditions are met:
• The warning message does not appear when the power is turned on.
• Neither [i] nor [z] flashes when a cassette is inserted and the video operation buttons are pressed.

If moisture starts to condense, your camcorder sometimes cannot detect condensation. If this happens, the cassette is sometimes not ejected for 10 seconds after the cassette lid is opened. This is not a
malfunction. Do not close the cassette lid until the cassette is ejected.

**Note on moisture condensation**
Moisture may condense when you bring your camcorder from a cold place into a warm place (or vice versa) or when you use your camcorder in a humid place as shown below.
- When you bring your camcorder from a ski slope into a place warmed up by a heating device.
- When you bring your camcorder from an air conditioned car or room into a hot place outside.
- When you use your camcorder after a squall or a shower.
- When you use your camcorder in a hot and humid place.

**How to avoid moisture condensation**
When you bring your camcorder from a cold place into a warm place, put your camcorder in a plastic bag and seal it tightly. Remove the bag when the air temperature inside the plastic bag has reached the surrounding temperature (after about one hour).

**Video head**
If you play back a tape recorded in HDV format, the image and sound may freeze for a while (about 0.5 seconds). This occurs if the HDV signals cannot be recorded or played back correctly because of dirt on the tape or video head. Depending on the cassette, this fairly infrequently occurs even if the cassette is brand new or is not used a lot. If this freezing point is created while playing back, you can solve this problem and see the pictures by rewinding after slightly forwarding. Such a freezing point cannot be recovered if it was created while recording. To prevent such a problem, use the Sony mini DV cassette.
- If the following problem occurs, clean the video heads for 10 seconds with the Sony DVM-12CLD cleaning cassette (optional).
  - Playback pictures do not move.
  - Playback pictures do not appear.
  - The sound breaks off.
  - Dirty video head. Use a cleaning cassette.
  - The following phenomenon occurs in HDV format.
    - The playback screen pauses.
    - The playback screen goes blank. (Solid blue screen)
  - The following phenomenon occurs in DV format.
    - Block-noise appears.
    - The playback screen goes blank. (Solid blue screen)
  - The video heads will be worn after long use. If you cannot obtain a clear image even after using a cleaning cassette (optional), the video heads may be worn out. Please contact your Sony dealer or local authorized Sony service facility to have the video heads replaced.

**LCD screen**
- Do not exert excessive pressure on the LCD screen, as it may cause damage.
- If your camcorder is used in a cold place, a residual image may appear on the LCD screen. This is not a malfunction.
- While using your camcorder, the back of the LCD screen may heat up. This is not a malfunction.
To clean the LCD screen
If fingerprints or dust make the LCD screen dirty, it is recommended you use a soft cloth to clean it. When you use the LCD Cleaning Kit (optional), do not apply the cleaning liquid directly to the LCD screen. Use cleaning paper moistened with the liquid.

On handling the casing
- If the casing is soiled, clean the camcorder body with a soft cloth lightly moistened with water, and then wipe the casing with a dry soft cloth.
- Avoid the following to avoid damage to the finish.
  - Using chemicals such as thinner, benzine, alcohol, chemical cloths, repellent, insecticide and sunscreen.
  - Handling with above substances on your hands.
  - Leaving the casing in contact with rubber or vinyl objects for a long period of time.

About care and storage of the lens
- Wipe the surface of the lens clean with a soft cloth in the following instances:
  - When there are fingerprints on the lens surface.
  - In hot or humid locations
  - When the lens is exposed to salty air such as at the seaside.
- Store in a well-ventilated location subject to little dirt or dust.
- To prevent mold, periodically clean the lens as described above. It is recommended that you operate your camcorder about once a month to keep it in optimum state for a long time.

On charging the pre-installed rechargeable battery
Your camcorder has a pre-installed rechargeable battery to retain the date, time, and other settings even when the POWER switch is set to OFF (CHG). The pre-installed rechargeable battery is always charged while your camcorder is connected to the wall outlet via the AC Adaptor or while the battery pack is inserted. The rechargeable battery will be fully discharged in about 3 months if you do not use your camcorder at all without the AC Adaptor connected or the battery pack attached. Use your camcorder after charging the pre-installed rechargeable battery. However, even if the pre-installed rechargeable battery is not charged, the camcorder operation will not be affected as long as you are not recording the date.

Procedures
Connect your camcorder to a wall outlet using the supplied AC Adaptor, and leave it with the POWER switch set to OFF (CHG) for more than 24 hours.

Continued
Removing dust from inside the viewfinder

1 Remove the viewfinder.
   While sliding the viewfinder release lever to the left 1, remove the
   viewfinder 2.

2 Remove dust from inside the viewfinder and the part shown below with a blower.

3 Attach the viewfinder following the reverse procedure of step 1.

of the image sensor’s effective pixel count.
*3 The focal length figures are actual figures resulting from wide angle pixel read out.

Output connectors

**AUDIO/VIDEO output**
- 10-pin connector
- Video signal: 1 Vp-p, 75 Ω (ohms), unbalanced
- Luminance signal: 1 Vp-p, 75 Ω (ohms), unbalanced
- Chrominance signal: 0.286 Vp-p, 75 Ω (ohms), unbalanced
- Audio signal: 327 mV (at load impedance 47 kΩ (kilohms)), Output impedance with less than 2.2 kΩ (kilohms)

**COMPONENT OUT jack**
- Y: 1 Vp-p, 75Ω (ohms), unbalanced Pb/Pr, Cb/Cr: +/- 350 mVp-p

**HDMI OUT jack**
- TypeA (19-pin)

Input/Output connectors

**LANC jack**
- Stereo mini-minijack (Ø 2.5 mm)

**USB jack**
- mini-B

**HDV/DV jack**
- i.LINK interface (IEEE 1394, 4-pin connector S100)

**LCD screen**

**Picture**
- 8.8 cm (3.5 type, aspect ratio 16:9)

**Total dot number**
- 211 200 (960 × 220)

General

**Power requirements**
- DC 7.2 V (battery pack)
- DC 8.4 V (AC Adaptor)

**Average power consumption**
- During camera recording using the viewfinder with normal brightness:
  - HDV recording 5.9 W
  - DV recording 5.7 W
- During camera recording using the LCD with normal brightness:
  - HDV recording 5.9 W
  - DV recording 5.7 W

**Operating temperature**
- 0 °C to + 40 °C (32 °F to 104 °F)

**Storage temperature**
- -20 °C to + 60 °C (-4 °F to + 140 °F)

**Dimensions (approx.)**
- 145 × 156 × 322 mm
  - (5 3/4 × 6 1/4 × 12 3/4 in.) (w/h/d) including the projecting parts
- 145 × 156 × 322 mm
  - (5 3/4 × 6 1/4 × 12 3/4 in.) (w/h/d) including the projecting parts with batterypack NP-F570

**Mass (approx.)**
- 1.4 kg (3 lb 2 oz) main unit only
- 1.6 kg (3 lb 10 oz) including the NP-F570 rechargeable battery pack, cassette, and lens hood with lens cover

**Supplied accessories**
- See page 16.
**AC Adaptor AC-L15A**

**Power requirements**
- AC 100 - 240 V, 50/60 Hz

**Current consumption**
- 0.35 - 0.18 A

**Power consumption**
- 18 W

**Output voltage**
- DC 8.4 V*

**Operating temperature**
- 0 °C to 40 °C (32 °F to 104 °F)

**Storage temperature**
- -20 °C to + 60 °C (-4 °F to + 140 °F)

**Dimensions (approx.)**
- 56 × 31 × 100 mm
- (2 1/4 × 1 1/4 × 4 in.) (w/h/d)
- excluding the projecting parts

**Mass (approx.)**
- 190 g (6.7 oz) excluding the power cord

* See the label on the AC Adaptor for other specifications.

**Rechargeable batterypack NP-F570**

**Maximum output voltage**
- DC 8.4 V

**Output voltage**
- DC 7.2 V

**Capacity**
- 15.8 Wh (2 200 mAh)

**Dimensions (approx.)**
- 38.4 × 20.6 × 70.8 mm
- (1 9/16 × 13/16 × 2 7/8 in.) (w/h/d)

**Mass (approx.)**
- 100 g (3.5 oz)

**Operating temperature**
- 0 °C to 40 °C (32 °F to 104 °F)

**Type**
- Lithium ion

Quick Reference

Identifying parts and controls

The numbers in ( ) are reference pages.

1. Zoom lever (33)
2. Viewfinder (22)
3. Viewfinder lens adjustment lever (22)
4. Viewfinder release lever (114)
5. Remote sensor (back) (123)
6. Rec lamp (back) (28)
   The rec lamp flashes if the remaining tape or battery is low.
7. PHOTO/EXPANDED FOCUS button (30)
8. REC START/STOP button (28)
9. Battery pack (18)
10. Accessory shoe
11. Focus ring (34)
12. Zoom ring (33)
13. LANC jack
   The LANC control jack is used for controlling the tape transport of video device and peripherals connected to it.
14. POWER switch (21)
15. COMPONENT OUT jack (51)
16. A/V OUT jack (51)
17. HDV/DV jack (51)
18. DC IN jack (18)
1. Hook for the shoulder strap (121)
2. EXPOSURE/IRIS button (35)
3. EXPOSURE/IRIS dial (35)
4. PUSH AUTO FOCUS button (34)
5. ND FILTER switch (36)
6. ASSIGN buttons (1/2/3)* (42)
7. AUTO LOCK switch (36)
8. GAIN button (37)
9. SHUTTER SPEED button (37)
10. WHT BAL (white balance) button (38)
11. MENU button (56)
12. SEL/PUSH EXEC dial (24)
13. STATUS CHECK button (47)
14. PICTURE PROFILE button (39)
15. (headphones) jack
   When you use headphones, the speaker on your camcorder is silent.

16. Tripod receptacle
    Make sure that the length of the tripod screw is less than 5.5 mm (7/32 inch). Otherwise, you cannot attach the tripod securely, and it may damage your camcorder.

17. FOCUS button* (34)

18. EXPANDED FOCUS button (35)
* The ASSIGN button 2, FOCUS button, and SHUTTER SPEED button have raised tactile dots for your convenience in locating the buttons.
Quick Reference

1. BATT RELEASE (battery release) button (19)
2. Hook for the shoulder strap (121)
3. OPEN/EJECT lever (26)
4. Grip belt (21)
5. Handle zoom switch (H/L/OFF) (33)
6. Handle zoom button (33)
7. REC START/STOP button (28)
8. MIC jack
   When a microphone is connected, it is dominantly used for sound recording over the internal microphone.
9. Rec lamp (front) (28)
   The rec lamp flashes if the remaining tape or battery is low.
10. Remote sensor (front) (123)
11. Lens (8)
12. Lens hood with lens cover (17)
13. Microphone

To attach the shoulder strap
Attach the shoulder strap (optional) to the hooks for the shoulder strap.
Identifying parts and controls (Continued)

1 LCD screen (22)
2 Video control buttons (REW, PLAY*, FF, PAUSE, STOP, SLOW, REC) (31)
3 ZEBRA switch (37)
4 MEMORY/DELETE button (82)
5 MEMORY/INDEX button (32)
6 MEMORY/PLAY button (32)
7 DISPLAY/BATT INFO button (47, 48)
8 VOLUME/MEMORY button* (32)
9 RESET button
   If you press the RESET button, all settings including the clock setting (except the Picture profile and Camera profile settings) return to the default.
10 HDMI OUT jack (51)
11 USB jack (83)
12 “Memory Stick Duo” slot (26)
* Each of the PLAY button, VOLUME/MEMORY button and MEMORY/INDEX button has a raised tactile dot. (The MEMORY/INDEX button has it on the + side.) Use it to identify the location of the buttons.

To attach the jack cover
Attach the jack cover as shown in the illustration.
**Remote Commander**

Remove the insulation sheet before using the Remote Commander.

![Insulation sheet](image)

1. **PHOTO (30)**
   The on-screen image when you press this button will be recorded onto the “Memory Stick Duo” as a still image.

2. **Memory control buttons (Index, –/+), Memory/playback) (32)**

3. **SEARCH M. (49)**

4. **REWIND, PLAY, FAST-FORWARD, PAUSE, STOP, SLOW** (31)

5. **ZERO SET MEMORY (49)**

6. Transmitter

7. **START/STOP (28, 49)**

8. **Power zoom (33)**

9. **DISPLAY (47)**

**Notes**

- Aim the Remote Commander towards the remote sensor to operate your camcorder.
- Point the remote sensor away from strong light sources such as direct sunlight or overhead lighting. Otherwise, the Remote Commander may not function properly.
- When you are operating with the Remote Commander supplied with your camcorder, your VCR may also operate. In that case, select a commander mode other than VTR 2 for your VCR, or cover the sensor of your VCR with black paper.

**To change the battery of the Remote Commander**

1. While pressing on the tab, inset your fingernail into the slit to pull out the battery case.
2. Place a new battery with the + side facing up.
3. Insert the battery case back into the Remote Commander until it clicks.

**WARNING**

Battery may explode if mistreated. Do not recharge, disassemble or dispose of in fire.

- When the lithium battery becomes weak, the operating distance of the Remote Commander may shorten, or the Remote Commander may not function properly. In this case, replace the battery with a Sony CR2025 lithium battery. Use of another battery may present a risk of fire or explosion.
Indicators for the LCD screen and viewfinder

The numbers in ( ) are reference pages.
The indicators will not be recorded on the tape during recording.

### Recording movies

1. Recording format (HDV1080i or DV) (69)
   Recording mode (SP or LP) is also displayed in the DV format.
2. Remaining battery (approx.)
3. Recording status ([STBY] (standby) or [REC] (recording))
4. During recording:
   - Tape counter (hour: minute: second)
   - Time code (hour: minute: second: frame)
5. Recording capacity of the tape (approx.)
6. Audio level display (67)

### Recording still images

7. Recording folder (73)
8. Image size (71)
9. Quality ([FINE] or [STD]) (71)
10. Recording indicator

### Data code during recording

The date/time during recording and the camera setting data will be recorded automatically. They do not appear on the screen during recording, but you can check them as [DATA CODE] during playback (67).
**Viewing movies**

**11** Tape transport indicator
Recording mode (SP or LP) appears when a tape recorded in the DV format is played back.

**Viewing still images**

**12** Data file name
**13** Picture number/Total number of recorded pictures in the current playback folder
**14** Playback folder (73)
**15** Previous/Next folder icon
The , , icons appear when the first or last picture of the current folder is displayed and when there are multiple folders on the same “Memory Stick Duo.” You can move to Previous/Next folder with the VOLUME/MEMORY button.
