DVGate Motion Appears To Drop Frames In The Preview Window During Capture. PCV E302DS E308DS E314DS E518DS

Video is displayed in the Preview window of DVGate Motion to allow the setting of in and out (start and stop) points on the tape for capture. After all points have been set and Capture is selected the system accesses the camera and captures the video frames to a file.

When the capture is complete message box appears, click the OK button. A window will then appear reporting any lost frames. If all entries are zero, the video was captured without any lost frames.
