

Microsoft Golf Multiplayer Setup

Q. I'd like to play Microsoft Golf with my friends over the modem with my PCG 705/707, but I cannot select the Com port I need (Com 2) in multiplayer modem play. How can I fix this?

A. To enable the multiplayer feature of Microsoft Golf on these models, allowing play via modem by both dial-up phone and Internet, you will need to download and install a Microsoft Golf Multiplayer PatchFile from Microsoft.

After installing the patch you will be prompted to install DirectX. DO NOT INSTALL DIRECTX. The DirectX version on the patch is older than the one in your Sony Notebook.

**This patch, GLFPATCH.EXE, can be downloaded from:
