Use a surge arrestor to protect against electrical surges.

FCC Radio Frequency Exposure (United States)

The available scientific evidence does not show that any health problems are associated with using low power wireless devices. There is no proof, however, that these low power wireless devices are absolutely safe. Low power Wireless devices emit low levels of radio frequency energy (RF) in the microwave range while being used. Whereas high levels of RF can produce health effects (by heating tissue), exposure to low level RF that does not produce heating effects causes no known adverse health effects. Many studies of low level RF exposures have not found any biological effects. Some studies have suggested that some biological effects might occur, but such findings have not been confirmed by additional research. The Notebook Computer (PCG-571L) has been tested and found to comply with the Federal Communications Commission (FCC) guidelines on radio frequency energy (RF) exposures. The maximum SAR levels tested for

the Notebook Computer (PCG-571L) has been shown to be 0.0285 W/kg at Body in condition of right side of display at a middle channel of band.

Users are not permitted to make changes or modify the system in any way.

Applying Ergonomics

Your computer is a portable device and can be used in a variety of environments. Whenever possible, you should apply the following ergonomic considerations:

- ❑ **Position of your computer** — Place the computer directly in front of you as you work. Keep your forearms horizontal, with your wrists in a neutral, comfortable position while using the keyboard, touch pad, or external mouse. Let your upper arms hang naturally at your sides. Take breaks during sessions with your computer. Excessive use of the computer may strain muscles or tendons.
- ❑ **Furniture and posture** — Sit in a chair with good back support and armrests. Adjust the level of the chair so your feet are flat on the floor. A footrest may make you more comfortable. Sit in a relaxed, upright posture and avoid slouching forward or leaning far backward.
- ❑ **Viewing angle of the computer's display** — Tilt the display to find the best viewing angle. Also try adjusting the brightness setting of the display. Following these suggestions can reduce eye strain and muscle fatigue.
- ❑ **Lighting** — Choose a location where windows and lights do not create glare or reflection on the display. Use indirect lighting to avoid bright spots on the display. You can purchase accessories for your display that help reduce glare. Proper lighting adds to your comfort and work effectiveness.
- ❑ **Placement of an external display** — When using an external display, set the display at a comfortable viewing distance. Make sure the display screen is at eye level or slightly lower when you are sitting in front of the monitor.

You may not need to reinstall the entire contents of your hard drive. If you experience a problem with your computer, reinstalling an individual device driver or program may correct the problem. Use the Application Recovery CDs to reinstall individual programs and device drivers. See “Using the Application Recovery CDs” for more information.

The System Recovery CDs contain a backup copy of all the programs originally installed on your hard disk. It can be used only to recover the hard disk of the Sony computer you purchased.

When you successfully complete your system recovery, you are prompted to complete the Windows® registration process.

Caring for Your Computer

This section provides information on how to safely use your Sony computer.

- ☐ Handling the LCD Screen

VAIO® Computer Quick Start

Storing Your Computer

- ☐ Do not use or store your computer in a location subject to:
 - ☐ Heat sources, such as radiators or air ducts
 - ☐ Direct sunlight
 - ☐ Excessive dust
 - ☐ Moisture or rain
 - ☐ Mechanical vibration or shock
 - ☐ Strong magnets or speakers that are not magnetically shielded
 - ☐ Ambient temperature higher than 95°F (35°C) or less than 40°F (5°C)
 - ☐ High humidity
- ☐ Do not place electronic equipment near your computer. When running, the computer's electromagnetic field may cause other electronic equipment in close proximity to malfunction.
- ☐ Provide adequate air circulation to prevent internal heat buildup. Do not place your computer on porous surfaces such as rugs or blankets, or near materials such as curtains or draperies that may block ventilation. Leave a space of at least 8 inches (20 cm) behind the back of the computer.
- ☐ If the computer is brought directly from a cold location to a warm one, moisture may condense inside your computer. In this case, allow at least one hour before turning on your computer. If any problems occur, unplug your computer, and contact your Sony Service Center.
- ☐ The computer uses high-frequency radio signals and may interfere with radio or TV reception. Should this occur, move the computer a suitable distance away from the radio or TV.
- ☐ Do not drop the computer or place heavy objects on top of the computer.

Using Cables and Connections

- ☐ Use only specified peripheral equipment and interface cables.
- ☐ Do not use cut or damaged connection cables.
- ☐ If the telephone company makes a service call to your home or office and determines that your computer is responsible for a problem, the telephone company may bill you for the service call. Also, if you do not disconnect your computer when it is adversely affecting a telephone line, the telephone

company has the right to disconnect your service until you correct the problem.

Cleaning Your Computer

- ❑ Clean the computer with a soft, dry cloth or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder, or solvent such as alcohol or benzine, as these may damage the finish of your computer. You can use canned compressed air specifically for computers to remove dust.
- ❑ If a solid object falls onto the computer or a liquid leaks into the computer, immediately turn off and unplug the computer. It is best to have the computer checked by qualified personnel before you use it again.
- ❑ Avoid rubbing the LCD screen as this can damage the screen. Use a soft, dry cloth to wipe the LCD screen or canned compressed air.
- ❑ Always disconnect the power cord before cleaning the computer.

Handling the LCD Screen

- ❑ Direct sunlight can damage the LCD. Be careful when using the computer near a window.
- ❑ Do not scratch the LCD or exert pressure on it. This can cause a malfunction.
- ❑ Using the computer in low temperature conditions may produce a residual image on the screen. This is not a malfunction. When the computer returns to normal temperature, the screen returns to normal.
- ❑ The screen becomes warm during operation. This is normal and does not indicate a malfunction.
- ❑ The LCD is manufactured using high-precision technology. You may, however, see tiny black points and/or bright points (red, blue, or green) that continuously appear on the LCD. This is a normal result of the manufacturing process and does not indicate a malfunction.

Troubleshooting Your Computer

What do I do if my computer won't start?

- ❑ Make sure the computer is securely plugged into a power source and turned on. Make sure the power indicator shows the power is on.
- ❑ Make sure the battery is inserted properly and charged.
- ❑ Make sure the floppy disk drive (if applicable) is empty.
- ❑ If the computer is plugged into a power strip or uninterruptible power supply (UPS), make sure the power strip or UPS is turned on and working.
- ❑ If you are using an external display, make sure it is plugged into a power source and turned on. Make sure the brightness and contrast controls are adjusted correctly. See the guide that came with your display for details.
- ❑ Disconnect the AC adapter and remove the battery. Wait one minute. Reattach the AC adapter and reinsert the battery. Turn on the power.
- ❑ Condensation may cause the computer to malfunction. If this occurs, do not use the computer for at least one hour.
- ❑ If the computer still does not turn on, follow these steps:
 - 1 Unplug the power cord and remove the battery.
 - 2 Use a thin, straight object (such as a paper clip) to press the reset button.
 - 3 Reinsert the power cord and the battery.
 - 4 Turn on the computer.

What do I do if a BIOS error appears when my computer starts?

If the message "Press <F1> to resume, <F2> to setup" appears at the bottom of the screen, follow these steps:

- 1 Press **F2**. The **BIOS Setup** menu appears.
- 2 Set the date (month/day/year). Press **Enter**.

- 7 Select **Exit (Save Changes)**, and press **Enter**. The **Setup Confirmation** window appears again.
- 8 Select **Yes**, and press **Enter**. The computer restarts.

 If this occurs on a regular basis, contact Sony Computing Support (<http://www.sony.com/pcsupport>).

What do I do if the message “Operating system not found” appears when my computer starts, and why won’t Windows start?

- ☐ Make sure the computer does not have a “non-bootable” floppy disk in the floppy disk drive (if applicable).
- ☐ If a non-bootable floppy disk is in the drive:
 - 1 Remove the floppy disk.
 - 2 Restart the computer and confirm that the Microsoft® Windows® operating system starts properly.
- ☐ If Windows still does not start, follow these steps to initialize the BIOS:
 - 1 If there is a disk in the floppy disk drive, then remove it.
 - 2 Turn off the computer.
 - 3 Remove any peripheral devices connected to the computer.
 - 4 Restart the computer.
 - 5 Press **F2** when the Sony logo appears. The **BIOS Setup** window appears.
 - 6 Press the **Right Arrow** key → to select the **Exit** menu.
 - 7 Press the **Down Arrow** key ↓ to select **Get Default Values**. The message **Load default values for all SETUP items** appears.
 - 8 Press **Enter**. The **Setup Confirmation** window appears.
 - 9 Select **Yes**, and press **Enter**.

VAIO® Computer Quick Start

- 10 Select **Exit (Save Changes)**, and press **Enter**. The **Setup Confirmation** window appears again.
- 11 Select **Yes**, and press **Enter**. The computer restarts.

If your computer continues to display the message “Operating system not found,” and Windows does not start, use your supplied System Recovery CDs to restore the programs that shipped with your computer. See “Using the System Recovery CDs” for more information.

The System Recovery CD restores your computer to its original state, so user data and applications will be lost.

Why does my computer stop responding? Why can't I turn off my computer?

It is best to turn off your computer using the Turn Off Computer option on the Microsoft® Windows® Start menu, located on the taskbar. Using other methods, including those listed below, may result in loss of unsaved data.

- ☐ Click **Start** on the Windows® taskbar, select **Turn Off Computer**, and then click **Turn Off**.
- ☐ If your computer does not turn off, press the **Ctrl+Alt+Delete** keys simultaneously. When the **Windows Task Manager** dialog box appears, click **Turn Off** from the **Shut Down** menu.
- ☐ If your computer still does not turn off, press and hold the power button or slide and hold the power switch until the computer turns off.
- ☐ If your computer stops responding while playing a CD or DVD, press the **Ctrl+Alt+Delete** keys simultaneously. You can turn off the computer from the **Windows Task Manager**.

Pressing the **Ctrl+Alt+Delete** keys simultaneously or turning off the computer with the power button or switch may cause loss of data.

- ☐ Remove the AC adapter and battery.

Why won't my computer enter Standby or Hibernate mode?

Your computer's operating system may become unstable if the operating mode is changed before the computer completely enters Standby or Hibernate mode.

To restore the computer to normal operating stability:

- 1 Close all open programs.
- 2 Restart the computer. Follow these steps:
 - 1 Press the **Windows** key .
 - 2 Press **U**.
 - 3 Press **R** to select restart.
- 3 If the computer does not restart, follow these steps:
 - 1 Press the **Ctrl+Alt+Delete** keys simultaneously. The **Windows Task Manager** window appears.
 - 2 Press and release **Alt** to highlight the menu bar, and press the **Right Arrow**  key to select **Shut Down**.
 - 3 Press **Enter**.
 - 4 Press **R** to select restart.
- 4 If this procedure does not work, press and hold the power button until the computer turns off.

Why is the sound of my computer's fan so loud?

The computer's fan may be running at a high speed to cool the CPU. By lowering the CPU speed, you also lower the speed and noise level of the computer's fan. If your computer comes with the PowerPanel™ utility¹, use it to lower the CPU speed. If your computer does not come with the PowerPanel utility, use the power schemes to lower the CPU speed.

To lower the CPU speed using the PowerPanel utility:

- 1 On the Windows® taskbar, right-click either the **CPU** icon  or **Profile** icon , depending on the model you purchased.
- 2 Select **Edit/Create Profiles**. The **AC Power Profile Editor** window appears.
- 3 Double-click **System** to open the **System** submenu if it is not already open.
- 4 Double-click **CPU Fan Control**, and select **Level 1 Quiet**.
- 5 Restart your computer.

¹ Available on selected models.

VAIO® Computer Quick Start

 See PowerPanel Help for more information.

To lower the CPU speed using the power schemes:

- 1 Click **Start** on the Windows® taskbar, and click **Control Panel**.
- 2 Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
- 3 Select **Portable/Laptop** in the **Power schemes** box.
- 4 Click **Apply**.
- 5 Click **OK**.

Why does the System Properties dialog box display a slower CPU speed than the maximum?

This is normal. Because your computer's CPU utilizes a type of CPU speed controlling technology for power conservation purposes, System Properties may display the CPU's current speed instead of the maximum speed.

Why don't my changes appear on the computer screen (LCD)?

You may need to refresh the computer screen. Press and hold the **Windows** key , and press **D** twice.
