FEATURES

- **DIGITAL SECURITY** uses higher technology to keep your private conversations private; sophisticated digital speech encoding between handset and base unit
- **DIGITAL SOUND QUALITY** uses the technology behind the Compact Disc to achieve amazing voice accuracy; sounds less like older cordless phones, more like a corded phone
- **900 MHZ DIGITAL SPREAD SPECTRUM REDUCES INTERFERENCE AND EXTENDS RANGE**—900 MHz band starts with low interference, because it's far less crowded than conventional 43 - 49 MHz band; Digital Spread Spectrum technology provides about 100 times bigger output than other 900 MHz systems; so you can carry your cordless phone further—and still carry on a conversation
- **AUTO CHANNEL HOPPING** automatically scans all available channels and selects the clearest one for your call; during your call, if any interference is encountered, automatically hops to the channel that offers the clearest reception, without interrupting your conversation
- **1-WAY PAGING** sends a beep to the handset so you can summon a co-worker or family member or locate a missing handset
- **10-NUMBER SPEED DIALING** for two-step access to frequently dialed numbers
- **LAST NUMBER REDIAL** at the touch of a button
- **7-DAY STANDBY** for longer intervals between battery charges
- **OUT-OF-RANGE ALERT** when the handset is too far from the base unit
- **WALL MOUNTING** of base unit with supplied bracket, compatible with standard wall outlets
